リーディング練習

第3回　｜　部分演習（筆記全体の制限時間は流用しません）　｜　選択問題 31問

■ 出題構成・自己採点記録表

大問	問題番号	出題形式・内容	設問数	自己採点・点検
1	(1)〜(17)	短文の語句空所補充	17問	／17
2	(18)〜(23)	長文の語句空所補充	6問	／6
3	(24)〜(31)	長文の内容一致選択	8問	／8

■ 演習・印刷の手引き

1. 問題冊子には正答や解説を載せていません。解答用紙はA4横マークシート（1ページ）です。
2. 印刷時は「白黒・実際のサイズ（100%）」を選ぶと、マーク欄や英作文罫線が本番見本に近い実寸で出力されます。
3. 解き終わるまでは「解答・解説」を開かず、本番と同じ時間配分を意識して取り組んでください。
4. 同じ選択問題はアプリの「分野別練習」、英作文課題はアプリの「ライティング練習」でも学習・保存できます。

1

次の(1)から(17)までの（ ）に入れるのに最も適切なものを1, 2, 3, 4の中から一つ選び、その番号のマーク欄をぬりつぶしなさい。

(1) The city council voted to (　　) the old warehouse district into a pedestrian-friendly arts quarter.

1 transmit　**2** transform　**3** transplant　**4** transport

(2) Because the two witnesses gave (　　) accounts of the accident, investigators checked nearby security cameras.

1 comforting　**2** convincing　**3** conflicting　**4** cooperating

(3) Guests with food allergies are asked to (　　) the hotel restaurant at least three days before arrival.

1 notify　**2** nominate　**3** negotiate　**4** nourish

(4) Even a minor calculation error at the beginning of the experiment can (　　) the final measurements.

1 dissolve　**2** distribute　**3** distort　**4** dismiss

(5) The mountain hut has limited solar power, so hikers are urged to use electricity (　　).

1 abundantly　**2** fiercely　**3** roughly　**4** sparingly

(6) Dr. Miura's lecture was praised for making complex climate models (　　) to high school students.

1 acceptable　**2** accessible　**3** applicable　**4** adjustable

1　短文の語句空所補充（続き）

(7) The ferry service will remain suspended (　　) the harbor authorities confirm that the waves have subsided.

1 until　**2** unless　**3** whereas　**4** despite

(8) When choosing a study desk, you should take your room's lighting and chair height into (　　).

1 action　**2** effect　**3** place　**4** account

(9) The coach reminded the players that consistent daily practice is no less important (　　) physical talent.

1 as　**2** to　**3** than　**4** from

(10) Several local shops agreed to (　　) the youth marathon by providing water cups and towels.

1 sponsor　**2** scatter　**3** scold　**4** shrink

(11) Having worked in three coastal towns, Ms. Aoki has firsthand (　　) of how fishing communities adapt to storms.

1 permission　**2** knowledge　**3** appetite　**4** shelter

(12) The committee postponed its vote because the financial figures presented at the meeting were still (　　).

1 talkative　**2** tentative　**3** thorough　**4** tame

1　短文の語句空所補充（続き）

(13) New employees are paired with an experienced colleague who helps them (　　) into the workplace smoothly.

1 stumble　**2** split　**3** sweep　**4** settle

(14) The botanical garden asks visitors to stay on paved paths lest rare moss (　　) trampled.

1 is　**2** was　**3** be　**4** will be

(15) Far from (　　) interest in print books, the town's reading festival attracted its largest crowd in ten years.

1 losing　**2** lose　**3** lost　**4** to lose

(16) Please back up your presentation files onto an external drive in the (　　) of a network outage.

1 aspect　**2** behalf　**3** course　**4** event

(17) The new recycling bins have color-coded lids that correspond (　　) the symbols printed on product labels.

1 to　**2** at　**3** of　**4** for

2 A

次の英文を読み、その文意にそって(18)から(20)までの（ ）に入れるのに最も適切なものを1, 2, 3, 4の中から一つ選び、その番号のマーク欄をぬりつぶしなさい。

Rethinking Nighttime Lighting in Parks

Bright streetlamps have long been installed in urban parks to help pedestrians see footpaths and feel secure after sunset. In recent years, however, ecologists and lighting engineers have pointed out an unintended side effect: unshielded white lamps scatter glare into surrounding trees and ponds, disrupting nocturnal insects, bats, and roosting birds.

When a riverside town decided to replace its aging park lamps, officials initially assumed they had to choose between human safety and wildlife protection. Turning lights off completely made evening joggers uneasy. Yet consultations with lighting specialists revealed a third approach. By fitting hoods that directed light strictly downward and shifting from harsh blue-white LEDs to warmer amber tones, the town could keep paths clearly visible while leaving tree canopies dark. (***18***), motion sensors dimmed secondary trails late at night when nobody was walking past.

Six months after the upgrade, insect surveys along the riverbank showed a marked recovery in moth diversity compared with brightly lit neighboring streets. Residents also responded positively; many noted that shielded lamps actually made it easier to see obstacles on the ground because (***19***).

The project demonstrated that environmental care does not always demand giving up public convenience. Often, the real problem lies in wasted energy—in this case, light shining into the sky where no walker needs it. Careful design allowed the park to (***20***).

(18)

1 On the contrary　**2** In addition　**3** Otherwise　**4** Nevertheless

(19)

1 all footpaths had been covered with white paint

2 joggers were required to carry heavy lanterns

3 glare was no longer shining directly into pedestrians' eyes

4 trees along the river had been cut down

(20)

1 serve both evening visitors and nocturnal wildlife

2 illuminate the night sky for miles around

3 replace all outdoor paths with indoor tracks

4 double its electricity consumption every winter

2 B

次の英文を読み、その文意にそって(21)から(23)までの（ ）に入れるのに最も適切なものを1, 2, 3, 4の中から一つ選び、その番号のマーク欄をぬりつぶしなさい。

Why Recipes Sometimes Fail at High Altitude

Travelers staying in a mountain cabin two thousand meters above sea level are often puzzled when a familiar family recipe turns out strangely. Spaghetti takes longer to soften in boiling water, while a sponge cake that rises beautifully near the coast may puff up too fast in the oven and then collapse in the middle.

The cause is lower atmospheric pressure. At sea level, the weight of the air above pushes down on a pot of water, keeping molecules in liquid form until the temperature reaches 100 degrees Celsius. High in the mountains, thinner air exerts less pressure, so water begins boiling at around 93 degrees. Turning up the stove flame only produces more steam; it cannot make the boiling water any hotter. (***21***), foods cooked by boiling simply need extra minutes to finish.

Baking involves the same physics in reverse. Bubbles of steam and gas inside cake batter expand more forcefully when external air pressure is weak. Before the flour and eggs have time to set into a firm structure, the batter stretches too thin and sinks. Experienced mountain bakers compensate by reducing leavening powder slightly and raising oven temperature a little so the structure firms up sooner. (***22***), adding a spoonful of extra liquid prevents the batter from drying out in thin, dry mountain air.

Understanding these adjustments turns kitchen frustration into a practical science lesson. A recipe written in a coastal city assumes invisible environmental conditions. Once cooks recognize (***23***), they can adapt their methods confidently wherever they travel.

(21)　**1** Regardless　**2** By comparison　**3** Consequently　**4** Until recently

(22)　**1** Instead　**2** Otherwise　**3** Likewise　**4** Furthermore

(23)

1 why boiling water is hotter on mountaintops

2 how air pressure and moisture affect heat and expansion

3 that sponge cakes can never be baked above sea level

4 why coastal cooks never measure ingredients

3 A

次のEメールの内容に関して、(24)から(26)までの質問に対する答えとして最も適切なもの、または文を完成させるのに最も適切なものを1, 2, 3, 4の中から一つ選びなさい。

From: Mr. Watanabe, Geography Department
To: Fieldwork Group Leaders
Subject: Tablet checkout and offline maps for Thursday

Hello group leaders,
For Thursday's land-use survey around Kawagoe District, each group will receive one school tablet preloaded with our mapping app. Because mobile data reception can be weak near the old canal, you must download your assigned sector's offline map onto the tablet before leaving campus. Come to the geography prep room during Wednesday lunch break to check out your device and complete the download over school Wi-Fi.

During the survey, use the app to mark building types and photograph street signs, but avoid photographing private house nameplates or pedestrians' faces. Each tablet comes with a shoulder strap; whoever is carrying the device must wear the strap at all times when walking near water.

All groups must return to school by 3:45 p.m. so data can be backed up before club activities begin at 4:15 p.m. Do not delete accidental photos in the field—you might erase shared group pins by mistake. We will sort the files together back in the classroom.

Regards,
K. Watanabe

3A　Borrowing Tablets for the Field Survey　設問 (24)〜(26)

(24) Why do group leaders need to visit the geography prep room on Wednesday?

1 To repair broken shoulder straps.

2 To submit their completed land-use reports.

3 To pick up their tablet and download offline maps via school Wi-Fi.

4 To apply for mobile data SIM cards.

(25) Which precaution must students follow while conducting the survey?

1 Take close-up photos of house nameplates.

2 Avoid capturing pedestrians' faces and wear the shoulder strap near water.

3 Keep the tablet in a backpack near the canal.

4 Upload every photo immediately over mobile data.

(26) Why should students NOT delete unwanted photos while still in the field?

1 Deleted photos cannot be recovered from school Wi-Fi.

2 The geography teacher grades groups on total photo count.

3 Tablet screens lock automatically if files are deleted.

4 Doing so might accidentally erase shared map pins.

How Libraries Handle Returned Books Behind the Scenes

When library patrons slip a borrowed novel through a return slot, their part of the transaction takes two seconds. Behind the wall, however, getting thousands of returned items back onto the exact shelves where the next reader can find them is a logistical challenge. Even a book placed two shelves away from its call number is effectively lost until someone spots it during a manual shelf check.

Many large public libraries have adopted radio-frequency identification, or RFID, tags—thin stickers with tiny antennas placed inside book covers—paired with conveyor belts that sort returned items into bins by floor and subject. Automation speeds up check-in and reduces repetitive strain on staff wrists. Yet technology alone has not made human judgment unnecessary.

Machines cannot easily tell whether a picture book has a torn page, whether a travel guide is missing its fold-out map, or whether rain has dampened the corners of a textbook. Staff still inspect items as they come out of the bins, setting aside damaged volumes for tape repair or drying before mildew can spread to neighboring books on the shelf. In addition, librarians watch which topics return in waves—such as gardening in April or tax guides in February—and place popular returns on front display tables rather than sending them straight to distant stacks.

Smaller branch libraries without conveyor systems rely on simple workflow rules instead. Returned books are first arranged in exact order on wheeled carts before anyone walks into the reading room, cutting shelving time in half and keeping aisles clear for visitors. New student assistants are also asked to shelve for only thirty minutes at a stretch, because fatigue sharply increases misplacement mistakes.

Whether a library uses sensor-guided belts or hand-pushed carts, accuracy depends on combining reliable routines with attentive human eyes. A catalog is useful only when the physical book is actually waiting where the screen says it is.

3B　How Libraries Handle Returned Books Behind the Scenes　設問 (27)〜(31)

(27) Why is placing a returned book even slightly out of order a serious problem?

1 Readers and staff cannot locate the book until a manual shelf check finds it.

2 It causes the RFID sensor at the entrance to ring.

3 It damages the spine of neighboring books.

4 The online catalog automatically deletes the book's title.

(28) What benefit of RFID sorting systems is mentioned in the second paragraph?

1 They automatically mend torn pages inside picture books.

2 They speed up check-in and lessen physical strain on staff.

3 They dry damp textbooks before shelving them.

4 They rewrite catalog descriptions for new novels.

(29) Why do librarians sometimes place returned books on front display tables instead of distant stacks?

1 To highlight seasonal topics that many visitors are currently looking for.

2 Because conveyor belts cannot reach the upper floors.

3 Because damaged books must be dried near the entrance.

4 To avoid scanning those books into the computer system.

(30) Why do smaller branch libraries limit student assistants to thirty-minute shelving shifts?

1 Carts can hold only thirty minutes' worth of books.

2 Reading rooms close every half hour for cleaning.

3 Tiredness makes workers much more likely to put books in the wrong spot.

4 Assistants must answer phone calls for the rest of the day.

(31) Which statement best summarizes the author's main conclusion?

1 Conveyor belts have completely replaced human staff in modern libraries.

2 Small libraries should stop lending travel guides with fold-out maps.

3 Patrons should shelve their own returned books to save time.

4 Digital catalogs work only when steady routines and human care keep physical books in the right place.
