2級

ROUND 02

英検2級形式

一次筆記（リーディング・ライティング）

第2回 問題冊子 ｜ 筆記目安時間：85分 ｜ 選択問題 31問 ＋ ライティング 2題

■ 出題構成・自己採点記録表

大問	問題番号	出題形式・内容	設問数	自己採点・点検
1	(1)〜(17)	短文の語句空所補充	17問	／17
2	(18)〜(23)	長文の語句空所補充	6問	／6
3	(24)〜(31)	長文の内容一致選択	8問	／8
4	Writing 1	ライティング（英文要約）（目安 45〜55語）	1題	□ 自己点検済
5	Writing 2	ライティング（英作文・意見論述）（目安 80〜100語）	1題	□ 自己点検済

■ 演習・印刷の手引き

1. 問題冊子には正答や解説を載せていません。解答用紙は2ページ構成です（1ページ目：A4横マークシート／2ページ目：A4縦ライティング解答欄）。
2. 印刷時は「白黒・片面・実際のサイズ（100%）」を選ぶと、マーク欄や英作文罫線が実寸で出力されます。

3. 解き終わるまでは「解答・解説」を開かず、本番と同じ時間配分を意識して取り組んでください。
4. 同じ選択問題はアプリの「分野別練習」、英作文課題はアプリの「ライティング練習」でも学習・保存できます。

短文の語句空所補充
1〜4から最も適切な答えを1つ選び、その番号を解答用紙にマークしなさい。

(1) The town council voted to (　　) the old harbour warehouse rather than demolish it.

1 abandon **2** renovate **3** scatter **4** deceive

(2) All visitors to the laboratory must obtain prior (　　) from the safety director.

1 illusion **2** extinction **3** authorization **4** frustration

(3) Because rainfall has been unusually scarce this spring, farmers are (　　) to conserve irrigation water.

1 striving **2** boasting **3** trembling **4** fading

(4) The two eyewitnesses gave (　　) accounts of the accident, so police had to check nearby security cameras.

1 identical **2** grateful **3** obedient **4** contradictory

(5) Regular exercise can help (　　) the negative effects of sitting at a desk all day.

1 counteract **2** exaggerate **3** cultivate **4** prosecute

1　短文の語句空所補充（続き）

(6) The airline offered meal vouchers to passengers as (　　) for the five-hour flight delay.

1 superstition　**2** compensation　**3** proportion　**4** legislation

(7) Although the new battery is slightly heavier, its capacity is (　　) superior to that of the previous model.

1 barely　**2** reluctantly　**3** vastly　**4** casually

(8) Dr. Patel's lecture was so technical that most first-year students could not (　　) her main point.

1 wander　**2** postpone　**3** flatter　**4** grasp

(9) When assembling the steel shelf, please follow the numbered steps (　　) sequence.

1 in　**2** by　**3** at　**4** on

(10) The small publishing house managed to stay afloat (　　) a series of popular children's science books.

1 in spite of　**2** by virtue of　**3** on behalf of　**4** in contrast to

1　短文の語句空所補充（続き）

(11) Only after the audit report was released (　　) how much money had been wasted.

1 the board realized　**2** realized the board　**3** did the board realize　**4** had realized the board

(12) Local fishers are concerned that warmer ocean currents may (　　) the migration routes of salmon.

1 disrupt　**2** applaud　**3** inherit　**4** conform

(13) The software update will take effect automatically unless users choose to opt (　　) beforehand.

1 up　**2** into　**3** over　**4** out

(14) Had it not been for the lighthouse keeper's quick warning, the fishing boat (　　) the rocks.

1 will strike　**2** strikes　**3** would have struck　**4** has struck

(15) The research team decided to (　　) with the outdated survey method and design a clearer questionnaire.

1 put up　**2** do away　**3** come up　**4** get along

1　短文の語句空所補充（続き）

(16) Participation in Saturday's beach cleanup is entirely (　　); nobody will be penalized for not attending.

1 compulsory　**2** voluntary　**3** inevitable　**4** unanimous

(17) The museum curator took great pains to keep the ancient silk scroll from being (　　) to direct sunlight.

1 exposed　**2** devoted　**3** accustomed　**4** obliged

1〜4から最も適切な答えを1つ選び、その番号を解答用紙にマークしなさい。

Why Hospital Signs Stopped Using Medical Department Names

Large hospitals can be intimidating places to navigate, especially for anxious patients arriving for the first time. Traditionally, corridor signs directed visitors using formal medical terms such as "Otolaryngology," "Nephrology," or "Ophthalmology." To doctors and nurses, these names were precise and unambiguous. To many patients and family members, however, the unfamiliar Latin and Greek words slowed them down and forced them to stop staff in hallways for directions.

When a regional medical center renovated its main building, a communication researcher observed visitors at the entrance desk for two weeks. Nearly forty percent of inquiries came from people who already held appointment slips yet could not match the technical department name to everyday language. The hospital had inadvertently designed its signs for people who already worked there rather than for **(18)**.

During the redesign, planners replaced complex terminology on main hallway signs with plain descriptions such as "Ear, Nose & Throat," "Kidney Care," and "Eye Clinic," accompanied by numbered color bands along the walls. Specialist terms were still printed in smaller letters underneath so medical referrals remained exact. **(19)**, nurses spent far less time giving basic directions, and fewer patients arrived late for appointments.

The project demonstrated that accuracy and clarity need not conflict. Keeping technical terms on medical records while using everyday words on public signs allowed the hospital to **(20)**.

(18)

1 surgeons performing operations
2 architects inspecting the roof
3 first-time visitors seeking treatment
4 suppliers delivering laboratory chemicals

(19)

1 Nevertheless
2 As a result
3 On the contrary
4 Prior to this

(20)

1 serve patients' practical needs without losing clinical precision
2 abolish appointment slips across all departments
3 require patients to memorize Greek medical terms
4 close the main entrance desk permanently

Planting Pocket Forests in Industrial Districts

Urban tree-planting campaigns often place single young trees at regular intervals along concrete sidewalks. While tidy in appearance, isolated street trees frequently struggle in compacted soil, suffer from heat reflected off asphalt, and grow slowly. In paved industrial districts where summer temperatures rise sharply, planners have begun testing an alternative approach known as "pocket forests."

Instead of spacing one species evenly along a curb, landscapers loosen a plot of soil no larger than a tennis court, enrich it with compost, and plant dozens of native tree and shrub species close together. Because the young plants compete gently for sunlight while shading the soil beneath them, moisture evaporates more slowly and roots establish themselves rapidly. Within three years, a dense multi-layered canopy can form, creating **(21)**.

Critics initially questioned whether tiny plots could make any measurable difference beside busy warehouses. Temperature sensors installed by university researchers showed that air directly inside and downwind of the pocket forests was several degrees cooler on summer afternoons than surrounding parking lots. **(22)**, factory workers began using benches beside the plots during lunch breaks, and songbirds returned to areas where they had rarely been seen.

Planners emphasize that pocket forests are not a substitute for large suburban parks, which offer sports fields and long walking trails. Rather, their strength lies in **(23)** where large expanses of open land are simply unavailable.

(21)

1 a shaded microclimate much faster than isolated street trees

2 a flat parking space for heavy delivery trucks

3 an indoor greenhouse made of glass panels

4 a single row of identical plastic fences

(22)

1 Otherwise

2 Instead

3 Furthermore

4 Regardless

(23)

1 replacing every sports stadium in the region

2 bringing ecological and cooling benefits into tight urban spaces

3 preventing native shrubs from growing roots

4 increasing asphalt reflection around warehouses

Notice Regarding the Archive Digitization Project

From: Marcus Vance, Head Archivist
To: Part-Time Scanning Assistants
Subject: Updated procedures for the newspaper collection

Dear assistants,
Thank you for your steady work digitizing our nineteenth-century town newspapers. Over the past month, our online archive has already been used by local high schools and historical researchers. As we move on to the older 1870–1885 volumes next Monday, we need to adjust two workflow rules to protect fragile paper.

First, please stop using the automatic sheet feeder completely. Even single pages from the 1870s are brittle along the margins and may tear if pulled by rollers. Every page must be placed by hand onto the overhead flatbed camera. This will reduce the number of pages scanned per hour, so we have removed the daily page target that applied last month. Quality and preservation take priority over speed.

Second, when an article contains faded ink that optical software cannot read reliably, please mark the file with the tag "MANUAL-CHECK" rather than guessing the missing words yourself. Our senior historians will review flagged pages every Thursday.

White cotton gloves turned out to reduce finger sensitivity and actually caused more accidental creases, so please wash and dry your hands thoroughly before each shift instead of wearing gloves. Let me know if you need training on the overhead camera before Monday.

Sincerely,
Marcus Vance

Notice Regarding the Archive Digitization Project — Questions

(24) Why has the daily page target been removed starting next Monday?

1 All nineteenth-century newspapers have already been scanned.

2 Assistants must place brittle pages by hand onto an overhead camera.

3 High schools asked the archive to upload fewer articles.

4 The overhead cameras will be out of order for a month.

(25) What should assistants do when faded ink makes words unclear?

1 Guess the most likely words based on the headline.

2 Throw the damaged newspaper page away.

3 Attach the tag "MANUAL-CHECK" for historians to review.

4 Rewrite the faded letters directly on the paper with a pen.

(26) Why are assistants asked NOT to wear white cotton gloves?

1 Gloves dulled finger sensitivity and led to more accidental creases.

2 Cotton gloves left blue stains on the camera lens.

3 The archive ran out of budget to wash the gloves.

4 Gloves prevented the optical software from recognizing text.

Rethinking How Cities Measure Bus Punctuality

Most city bus networks judge their performance by a familiar standard: whether each bus arrives at stops at the exact minute printed on the timetable. On quiet suburban routes that run twice an hour, this measure makes complete sense. Missing the 9:10 bus means waiting thirty minutes in the cold, so passengers check the clock before leaving home.

On busy urban corridors where buses are scheduled every five or six minutes, however, passengers behave differently. Commuters rarely consult a timetable; they simply walk to the stop expecting a bus to appear shortly. Yet heavy traffic frequently causes a frustrating pattern known as "bus bunching." If one bus is delayed for ninety seconds by a delivery van, slightly more passengers gather at the next stop. Boarding takes longer, delaying that bus further, while the following bus encounters almost empty stops and catches up. Soon two or three buses travel nose to tail, followed by a fifteen-minute gap.

Curiously, under traditional punctuality rules, an operator could try to keep drivers tied to fixed clock times even after traffic disrupted the pattern, or penalize drivers who paused briefly to restore spacing. When transit planners in Harborview analyzed passenger complaints, they realized riders on high-frequency routes did not care which specific bus they boarded; they cared about how long they waited on the sidewalk.

Harborview subsequently switched its evaluation of six-minute routes from timetable adherence to "headway regularity"—keeping the time interval between consecutive buses steady. Dispatchers gained authority to ask an ahead-of-schedule bus to wait forty seconds at a transfer hub so a gap would not widen downstream. Digital signs at stops also began showing "Every 6 minutes" alongside live countdowns rather than long lists of clock times.

Average waiting times fell by nearly twenty percent without adding extra vehicles or drivers. Nevertheless, transit specialists note that headway management works only when routes are frequent and dispatchers communicate clearly with passengers on board; nobody likes sitting at a stop for forty seconds unless the driver explains why. Choosing the right metric, they conclude, depends on matching measurement to how passengers actually experience a journey.

Rethinking How Cities Measure Bus Punctuality — Questions

(27) Why does timetable punctuality matter greatly on quiet suburban bus routes?

1 Buses run every five minutes throughout the day.

2 Passengers face a long wait if they miss a scheduled bus.

3 Suburban buses never stop for boarding passengers.

4 Delivery vans are banned from all suburban roads.

(28) How does "bus bunching" occur on busy urban routes?

1 All drivers intentionally take lunch breaks at the same stop.

2 A small initial delay increases boarding time, allowing the next bus to catch up.

3 Passengers refuse to board the first bus that arrives.

4 Timetables schedule three buses to depart at the exact same minute.

(29) What did Harborview planners learn from analyzing passenger complaints on frequent routes?

1 Riders cared mainly about sidewalk waiting time rather than specific bus numbers.

2 Every commuter memorized the printed timetable from morning to night.

3 Passengers preferred fifteen-minute gaps between buses.

4 Nobody used transfer hubs on weekdays.

(30) What did switching to "headway regularity" achieve in Harborview?

1 It eliminated the need for all bus drivers.

2 It cut average passenger waiting times by nearly twenty percent with existing buses.

3 It doubled the ticket price on suburban routes.

4 It forced suburban two-bus-per-hour routes to abandon timetables.

(31) According to the final paragraph, why is clear communication with onboard passengers necessary?

1 So passengers understand why a bus pauses briefly to balance spacing.

2 So passengers can drive the bus themselves at transfer hubs.

3 Because digital signs at bus stops have all been removed.

4 Because headway management works best when buses run once a day.

4 ライティング（英文要約）

解答は解答用紙（2ページ目）の指定された枠内に英語で書きなさい。（目安語数：45〜55語）

以下の英文を読んで、その内容を英語で要約し、解答欄に記入しなさい。本文にない自分の意見は加えないこと。（目安語数：45〜55語）

Returning Packaging Through Local Delivery Vans

As online shopping continues to grow, households receive millions of cardboard boxes and protective plastic cushions every week. Although cardboard can often be recycled through municipal collection, bulky packing materials quickly fill household bins, and manufacturing single-use boxes consumes considerable water and timber.

To address this issue, several delivery companies have begun testing reusable folding containers made of durable lightweight plastic. When a driver delivers a new order to an apartment building, customers can hand back flattened containers from previous deliveries so the van carries them back on its return trip.

However, the system faces practical challenges. Storing empty containers requires warehouse space, and some customers forget to return them promptly. To encourage timely returns, participating retailers now offer small shipping discounts whenever a container is scanned back at the door.

構成メモ・下書き欄（MEMO / PLANNING NOTES — 採点対象外・本番解答は解答用紙へ）

5 ライティング（英作文・意見論述）

解答は解答用紙（2ページ目）の指定された枠内に英語で書きなさい。（目安語数：80〜100語）

次のTOPICについて、あなたの意見とその理由を2つ書きなさい。POINTSは理由を書く際の参考として自由に用いてかまいません。（目安語数：80〜100語）

TOPIC: Today, some museums allow visitors to take photographs of exhibits without flash. Do you think more museums should adopt this policy?

POINTS:

- Education
- Promotion
- Manners
