MANATOBI / ORIGINAL PRACTICE

# 英検準1級
# リーディングトレーニング

## 第3回 問題冊子

## リスニング・英作文を含まない部分練習 ／ 全31問

| 大問 | 問題番号 | 内容 |
|---|---|---|
| 1 | 1〜18 | 短文の語句空所補充 |
| 2 | 19〜24 | 長文の語句空所補充 |
| 3 | 25〜31 | 読解 |

## 使い方

・解答用紙に答えを記入してください。問題冊子には正答を載せていません。
・問題・解説はA4縦、解答用紙はA4横。白黒・片面・実際のサイズ（100%）で印刷します。
・解き終わるまでは、別冊の解答・解説を開かないでください。
・同じ問題をアプリの分野別練習でも解けます。

独自作成した英検準1級形式のリーディング第3回です。リスニング・英作文・面接は含みません。公式教材ではなく、CSE・合否換算はしません。筆記全体の公式時間をリーディングだけの時間に流用しません。外部難度校正は未実施です。

氏名：＿＿＿＿＿＿＿＿＿＿＿＿＿＿＿＿＿＿＿＿

## 1

短文の語句空所補充
1〜4から最も適切な答えを一つ選び、解答用紙にマークしてください。

***(1)*** The commission's report offered a ( ) critique of port security, exposing gaps that earlier reviews had politely glossed over.

**1** perfunctory **2** trenchant **3** docile **4** deferential

***(2)*** Years of deferred maintenance left the viaduct so ( ) that heavy freight trucks had to be rerouted immediately.

**1** buoyant **2** affluent **3** dilapidated **4** ostentatious

***(3)*** The archive acquired a rare ledger whose annotations ( ) how medieval merchants hedged shipping risks.

**1** elucidate **2** obliterate **3** fabricate **4** expropriate

***(4)*** Because the two ministries issued contradictory guidelines, hospital administrators were left in a ( ) over how to report incidents.

**1** panacea **2** windfall **3** quandary **4** bastion

***(5)*** The defense attorney argued that isolated remarks taken out of context should not be used to ( ) the witness's character.

**1** burnish **2** emulate **3** appease **4** impugn

***(6)*** At first the startup's subscription model drew mockery, but steady renewals soon proved its strategy ( ).

**1** futile **2** prescient **3** erratic **4** negligible

***(7)*** Strict quarantine checks at the border helped ( ) the spread of the orchard pest before harvest season began.

**1** forestall **2** propagate **3** aggravate **4** instigate

***(8)*** The biographer resisted ( ), portraying the reformer's tactical blunders alongside her landmark achievements.

**1** austerity **2** jurisdiction **3** attrition **4** hagiography

1　短文の語句空所補充（続き）

---

***(9)*** Small coastal ferries remain (　　) to island clinics, delivering refrigerated vaccines when fog grounds helicopters.

**1** inimical　**2** superfluous　**3** indispensable　**4** tangential

***(10)*** The mediator's calm demeanor helped (　　) tensions between warehouse staff and logistics managers during contract talks.

**1** defuse　**2** inflame　**3** entrench　**4** perpetuate

***(11)*** Because rainfall in the basin is highly (　　), farmers rely on lined cisterns rather than seasonal streams.

**1** uniform　**2** capricious　**3** copious　**4** placid

***(12)*** The city council voted to (　　) the outdated curfew ordinance after courts ruled it unenforceable.

**1** enact　**2** rescind　**3** ratify　**4** buttress

***(13)*** Even staunch supporters admitted that the manifesto was too (　　) to guide practical budget choices.

**1** explicit　**2** pragmatic　**3** coherent　**4** nebulous

***(14)*** A single contaminated batch can (　　) years of painstaking work spent building trust in a food brand.

**1** consolidate　**2** vindicate　**3** jeopardize　**4** augment

***(15)*** The laboratory's new protocol requires researchers to (　　) raw sensor logs before submitting any manuscript.

**1** deposit　**2** suppress　**3** embellish　**4** confiscate

***(16)*** Although billed as a public consultation, the evening forum felt (　　) because every major contract had already been signed.

**1** pivotal　**2** incendiary　**3** momentous　**4** pro forma

1　短文の語句空所補充（続き）

---

***(17)*** After three dry winters, regional mayors urged industries to (　　) nonessential water use immediately.

**1** cut back on　**2** catch up with　**3** stand up for　**4** put up with

***(18)*** Initial skepticism about the night tram gradually (　　) appreciation as late-shift nurses and bakers began using it.

**1** fell short of　**2** gave way to　**3** kept pace with　**4** came down with

### *Why Negative Results Belong in the Record*

Scientific journals naturally gravitate toward studies that report clear, positive findings. Discovering that a compound inhibits a pathogen or that a teaching method raises test scores makes a compelling narrative for editors and readers alike. Yet most experiments conducted in laboratories and field sites do not confirm their initial hypothesis. When well-designed studies showing no measurable effect remain locked in file drawers, the published literature presents a distorted map of reality.

This publication bias carries practical costs. Independent teams across different universities may unknowingly repeat the same fruitless experiment, spending years of grant funding and volunteer effort on questions already answered in the negative elsewhere. Worse still, if ten laboratories test an ineffective intervention and only the single team that observes a fluke correlation publishes its paper, reviewers surveying the journals may conclude that the intervention works. A skewed record can thus (19).

Recognizing the problem, several funding agencies and journals have introduced "registered reports," in which reviewers evaluate a study's research question and statistical design before data are collected. If the protocol is rigorous, the journal commits in principle to publishing the outcome regardless of how the numbers turn out. (20), researchers face less pressure to slice datasets creatively until a statistically striking pattern appears.

Valuing null results does not mean celebrating sloppy experiments that fail merely because instruments were miscalibrated or samples were tiny. Methodological rigor matters even more when claiming the absence of an effect. Requiring open registries and pre-specified plans allows science to (21), turning instructive dead ends into shared public knowledge rather than private disappointments.

***(19)***

**1** eliminate the need for statistical review
**2** guarantee that every lab shares identical tools
**3** manufacture false confidence in weak claims
**4** prevent universities from applying for grants

***(20)***

**1** As a result
**2** By contrast
**3** Even though
**4** Otherwise

***(21)***

**1** reward only dramatic breakthroughs
**2** conceal preliminary hypotheses from peers
**3** curb wasted duplication and strengthen self-correction
**4** publish unverified trials without peer review

## *The Limits of Audio Guides in Museums*

Walk into almost any major exhibition today and visitors will be offered headphones or a smartphone code promising a richer encounter with the objects on display. Well-crafted audio commentary can supply historical context that wall labels lack space to explain, especially for complex ritual vessels or fragments whose original architectural setting has vanished. Yet curators have grown increasingly attentive to how spoken narration subtly choreographs what visitors notice—and ignore.

Because an audio track unfolds at a fixed pace, listeners tend to linger in front of highlighted masterpieces while walking briskly past unnumbered cases. Eye-tracking studies in galleries show that narration naming specific details directs gaze efficiently, yet it can also crowd out unscripted curiosity. Visitors wearing headphones converse far less with companions, turning what might have been a shared debate over an unfamiliar sculpture into parallel solo tours. Audio guides can therefore (22).

None of this implies that museums should strip galleries of interpretive aids and leave newcomers mystified. Unassisted minimalism often privileges visitors who already possess specialist background knowledge, making unfamiliar rooms feel aloof rather than welcoming. (23), designers are experimenting with shorter, modular clips, ambient listening benches, and discreet printed cards that pairs of visitors can read aloud or set aside at will.

The goal is to treat interpretation as an invitation rather than an itinerary. When explanations leave pauses for silence, comparison, and disagreement, visitors gain tools to read unfamiliar craftsmanship without surrendering control of their attention. Thoughtful curation balances guidance with breathing room so exhibitions (24).

***(22)***

**1** force every visitor to study unnumbered cases

**2** increase spontaneous debate among large groups

**3** eliminate the need for wall labels entirely

**4** deepen understanding while narrowing exploration

***(23)***

**1** Otherwise

**2** Instead

**3** Meanwhile

**4** Regardless

***(24)***

**1** dictate an identical route for every ticket holder

**2** cater exclusively to trained art historians

**3** foster both informed comprehension and unscripted discovery

**4** replace physical artifacts with recorded lectures

**3** 長文の内容一致選択
1〜4から最も適切な答えを一つ選び、解答用紙にマークしてください。

## *Rethinking Midnight Streetlighting*

For over a century, brighter streets after dark were treated as an unqualified civic good. Expanding electric lamp networks symbolized modernity, reassured pedestrians, and promised to deter crime. When municipalities began replacing amber sodium bulbs with crisp white light-emitting diodes (LEDs) in the early twenty-first century, engineers celebrated dramatic cuts in electricity bills and maintenance trips. Yet once entire districts glowed with daylight-like intensity from dusk until dawn, unexpected ecological and health complaints prompted cities to reconsider whether more illumination is always better.

Ecologists documented some of the earliest disruptions. Blue-rich white wavelengths scatter widely in the atmosphere and mimic twilight cues that govern insect navigation, amphibian breeding, and migratory birds. Urban trees standing directly beneath unshielded fixtures often retain leaves weeks past autumn frost, leaving branches vulnerable to winter storm damage. Meanwhile, sleep researchers noted that glare spilling through bedroom curtains suppresses melatonin production, while older pedestrians reported that harsh contrasts between dazzling lamps and deep shadows actually made curbs harder to judge.

Safety arguments proved more nuanced than simple "brighter equals safer" slogans suggested. Controlled studies across several European and North American municipalities found that uniform visibility and shielded downward beams mattered more than raw wattage; blinding glare can conceal hazards rather than reveal them. Where towns dimmed residential lamps during quiet post-midnight hours while keeping intersections and transit stops well lit, neither traffic collisions nor property offenses rose systematically.

Modern lighting upgrades therefore focus on precision rather than sheer output. Warm-spectrum LEDs, full-cutoff hoods that keep light below the horizontal plane, and adaptive timers allow municipalities to trim energy use further without plunging neighborhoods into darkness. Treating darkness as a shared environmental resource—to be interrupted thoughtfully where human activity requires it—reconciles public reassurance with nocturnal ecosystems.

## *Rethinking Midnight Streetlighting — Questions*

***(25)*** Why did early twenty-first-century LED conversions prompt cities to reexamine streetlighting policies?

**1** White LEDs consumed far more electricity than sodium lamps.

**2** Intense, blue-rich night lighting triggered unforeseen ecological and human visual problems.

**3** Manufacturers stopped producing replacement fixtures within two years.

**4** Pedestrians demanded that all residential streetlights be removed permanently.

***(26)*** What effect on urban trees is mentioned in the second paragraph?

**1** Sodium bulbs poison tree roots with heavy metals.

**2** Migratory birds strip bark from illuminated street trees.

**3** Warm-spectrum lamps prevent saplings from photosynthesizing in summer.

**4** Unshielded night light can delay leaf drop and expose branches to winter damage.

***(27)*** What did municipal studies suggest about street safety at night?

**1** Even visibility and glare control matter more than maximum brightness.

**2** Crime falls only when lamps shine above the horizontal plane.

**3** Dimming residential lights after midnight inevitably doubles traffic accidents.

**4** Intersections require less illumination than quiet cul-de-sacs.

## *When Regional Dialects Enter Civic Services*

Standardized national languages have historically simplified administration, schooling, and interregional commerce. Yet in regions where distinct dialects or minority varieties remain woven into everyday family life, conducting all public services exclusively in the standard form can create subtle barriers that officials rarely notice. Over the past two decades, hospitals, courts, and emergency hotlines in several countries have begun reassessing how local speech varieties function in high-stakes interactions.

Medical consultations illustrate why informal fluency matters. Older patients who read national broadcasts effortlessly may still describe pain intensity, dizziness, or emotional distress using regional idioms that lack one-to-one equivalents in textbook phrasing. When clinicians unfamiliar with local usage ask patients to "state symptoms plainly," speakers often shorten their explanations out of embarrassment, omitting timing or severity cues critical to diagnosis. Recruiting staff able to understand regional speech—or training practitioners in common local expressions—has improved history-taking accuracy without abandoning standard clinical records.

Skeptics sometimes worry that accommodating regional varieties in public offices will fragment civic cohesion or trap young speakers outside national labor markets. Experience from bilingual and bidialectal school programs suggests that this fear rests on a false choice. Students taught explicitly how local grammar differs from the standard register typically master formal writing more confidently than peers whose home speech is dismissed as careless slang. Naming the contrast turns unconscious habit into deliberate stylistic control.

Civic recognition also carries practical resilience benefits during disasters. Weather warnings or evacuation instructions delivered partly in trusted local phrasing often reach elderly residents faster than stiff bureaucratic bulletins, yet they work best when paired with unambiguous written maps and standard terminology for outside rescue teams. Rather than pitting regional speech against national intelligibility, effective public institutions treat repertoire—knowing when each register serves clarity—as a civic asset.

## *When Regional Dialects Enter Civic Services — Questions*

***(28)*** What problem can occur in medical settings when clinicians do not recognize regional idioms?

**1** Patients are legally required to write their own clinical charts.

**2** Older patients may curtail descriptions out of discomfort and leave out vital diagnostic details.

**3** Hospitals must translate all laboratory equipment manuals into local dialects.

**4** Clinicians cannot prescribe standard medications without court approval.

***(29)*** Why does the author reject the fear that acknowledging dialects in schools harms students' formal writing?

**1** Explicitly comparing local and standard structures helps students command formal style more effectively.

**2** National labor markets no longer require written communication.

**3** Dialect programs abolish standard grammar lessons after primary school.

**4** Students naturally stop speaking family varieties once idioms are listed.

***(30)*** According to the fourth paragraph, how do disaster warnings work best?

**1** By replacing maps and standard terms entirely with informal idioms.

**2** By broadcasting evacuation notices only after outside rescue teams arrive.

**3** By combining familiar local phrasing for residents with clear maps and standard terms for responders.

**4** By limiting emergency bulletins to written notices at municipal halls.

***(31)*** Which statement best expresses the central idea of the passage?

**1** Governments should replace national standard languages with regional dialects in legal codes.

**2** Medical and emergency staff should avoid written records to preserve oral traditions.

**3** Dialect diversity inevitably weakens social cohesion unless restricted to private homes.

**4** Public institutions serve citizens better when they treat command of both regional and standard registers as complementary tools.
