MANATOBI / ORIGINAL PRACTICE

英検準2級プラス リーディングトレーニング

第12回 問題冊子

リスニング・英作文を含まない部分練習 ／ 全31問

大問	問題番号	内容
1	1〜17	短文の語句空所補充
2	18〜23	長文の語句空所補充
3	24〜31	読解

使い方

・解答用紙に答えを記入してください。問題冊子には正答を載せていません。
・問題・解説はA4縦、解答用紙はA4横。白黒・片面・実際のサイズ（100%）で印刷します。
・解き終わるまでは、別冊の解答・解説を開かないでください。
・同じ問題をアプリの分野別練習でも解けます。

独自作成した英検準2級プラス形式のリーディング第12回です。リスニング・英作文・面接は含みません。公式教材ではなく、CSE・合否換算はしません。筆記全体の公式時間をリーディングだけの時間に流用しません。外部難度校正は未実施です。

氏名：＿＿＿＿＿＿＿＿＿＿＿＿＿＿＿＿＿＿＿＿

短文の語句空所補充
1〜4から最も適切な答えを一つ選び、解答用紙にマークしてください。

(1) To ( ) smooth ticket checking at the stadium gate, prepare your QR code screen before reaching the turnstile.

1 frustrate **2** fabricate **3** fluctuate **4** facilitate

(2) In ( ) with municipal fire codes, hallway bulletin boards may not cover emergency exit signs.

1 abundance **2** accordance **3** collision **4** defiance

(3) Because the island ferry carries fuel tanks on its open foredeck, smoking is prohibited throughout the ( ) voyage.

1 external **2** eternal **3** entire **4** eligible

(4) When negotiations over warehouse rent stalled, both companies agreed to abide ( ) an independent mediator's ruling.

1 by **2** to **3** on **4** for

(5) Not only ( ) the storm knock down orchard fences, but it also flooded the packing shed.

1 has **2** was **3** had **4** did

1　短文の語句空所補充（続き）

(6) Even subtle cracks in a clay teapot will show (　　) once dark oolong tea stains the glaze.

1 up　**2** off　**3** over　**4** down

(7) Before prescribing allergy drops, the eye doctor asked whether Haru had any adverse (　　) to preservatives.

1 relations　**2** reactions　**3** revisions　**4** reflections

(8) We appreciate your (　　) our survey before Friday so we can order enough vegetarian lunches.

1 completed　**2** complete　**3** completing　**4** to complete

(9) With two violinists out sick with the flu, Toma had to fill (　　) on second violin at the last minute.

1 out　**2** in　**3** up　**4** away

(10) Had the hikers checked the ridge wind forecast, they would never (　　) pitched their tent above the tree line.

1 been　**2** had　**3** be　**4** have

1　短文の語句空所補充（続き）

---

(11) Although the cedar chest is eighty years old, its tight-fitting drawers still slide with remarkable (　　).

1 precision　**2** prejudice　**3** privilege　**4** persuasion

(12) Try as she (　　), Miki could not recall the title of the jazz tune playing in the lobby.

1 will　**2** must　**3** might　**4** can

(13) The town's snowplow budget was used up in January, leaving little room to (　　) when February blizzards struck.

1 meditate　**2** manufacture　**3** memorize　**4** maneuver

(14) All glass jars returned to the dairy shop are sterilized in steam prior to (　　) refilled with milk.

1 been　**2** be　**3** being　**4** have

(15) What makes this coastal trail distinctive (　　) the black volcanic sand glistening between pine groves.

1 are　**2** is　**3** be　**4** were

1　短文の語句空所補充（続き）

---

(16) Because handmade soba noodles dry out quickly once cut, chefs prepare each batch on (　　) rather than hours ahead.

1 demand　**2** display　**3** default　**4** deposit

(17) To ensure impartiality, judges in the piano competition sit behind a screen so contestants remain (　　) until scores are tallied.

1 anxious　**2** ambiguous　**3** ambitious　**4** anonymous

Why Supermarkets Pack Berries in Vented Clamshell Boxes

Pick up a container of strawberries, raspberries, or blueberries at the market, and you will almost always find them sitting in a clear hinged plastic box perforated with narrow slots along the lid and base. Shoppers sometimes wish berries came in sealed airtight tubs or simple paper bags, yet post-harvest food scientists designed those slotted "clamshell" boxes around how delicate fruit breathes.

Even after leaving the vine, fresh berries remain living tissue: they consume oxygen and release carbon dioxide, heat, and water vapor. Seal warm berries inside an airtight container, and moisture condenses on the lid within an hour, creating damp droplets where gray mold spores multiply overnight. Conversely, loose paper bags crush soft raspberries during truck transport and hide bruised fruit at the bottom. Slotted clamshells cushion berries against bumps while letting cold refrigerator air flow straight through the stack. (18), berries reach home kitchens days fresher with far less spoilage.

Packaging waste is a real concern, of course. Because sticky label glue once ruined recycling batches, many producers now stamp product codes directly onto 100% recycled PET lids or test molded-pulp baskets with breathable cellulose windows. (19), shoppers should resist washing berries until right before eating—rinsing them days early traps water between seeds and speeds decay.

Balancing protective airflow with cleaner materials helps farmers and households alike (20).

(18)

1 On the contrary
2 Consequently
3 Otherwise
4 Nevertheless

(19)

1 Instead of recycling
2 By accident
3 At home
4 Previously

(20)

1 cut both food waste and unnecessary plastic impact
2 seal warm raspberries inside wet airtight jars
3 wash strawberries a full week before eating them
4 crush soft berries at the bottom of heavy sacks

How Acoustic Panels Quiet Noisy Restaurants

Anyone who has strained to hear a friend across a trendy café table knows the culprit: minimalist interiors with exposed concrete ceilings, glass walls, and hardwood floors. Hard, smooth surfaces look sleek in magazines, yet they reflect ninety-five percent of sound energy right back into the dining room. As background chatter rises, every table talks louder to compensate—a runaway spiral acousticians call the "Lombard effect."

Hanging heavy velvet curtains everywhere would deaden echoes, but many restaurateurs dislike bulky fabrics that trap cooking odors or clash with modern lighting. Acoustic engineers have responded with stealth sound absorbers disguised as everyday architecture. Micro-perforated wooden slats, recycled PET felt baffles painted to match ceiling beams, and even framed wall art backed with mineral wool swallow mid-range speech frequencies instead of bouncing them around. (21), placing thin felt pads under chair legs and rubber mounts beneath espresso grinders stops structure-borne clatter at its source.

Crucially, the goal in a lively bistro is not library silence; a room that is too dead makes diners feel self-conscious that neighboring tables can hear every whisper. Tuning absorption to keep reverberation under roughly half a second preserves a warm buzz while restoring effortless conversation. (22), guests linger comfortably for dessert, and servers make fewer order mistakes.

Thoughtful acoustic design proves that how a room sounds shapes hospitality (23).

(21)

1 Despite that
2 On the contrary
3 Otherwise
4 Likewise

(22)

1 As a result
2 Conversely
3 In vain
4 Until recently

(23)

1 only when every table whispers in total darkness
2 just as powerfully as lighting, furniture, or food presentation
3 by reflecting ninety-nine percent of chatter off bare concrete
4 without having any effect on servers or diners

Updated Baggage Tagging for Island Ferry Passengers

From: Seto Island Ferry Operations
To: Weekend Excursion Passengers
Subject: Color-coded luggage tags for multi-port sailings

Dear passengers,
Thank you for booking Saturday's 8:40 a.m. fast ferry serving Awaji, Shodoshima, and Takamatsu ports. Because this vessel calls at three harbors in quick succession—with just six minutes at each pier—passengers carrying wheeled suitcases larger than cabin-backpack size must store them on the lower-deck luggage racks upon boarding.

At the departure gate, staff will hand you a waterproof paper strap matching your destination port: GREEN for Awaji, ORANGE for Shodoshima, and BLUE for Takamatsu. Please loop the strap around your suitcase's TOP handle (not the side handle) so deckhands can sort racks by port at a glance and unload the right rack first.

Keep medications, cameras, and ferry tickets in a small daypack at your seat, as access to the lower luggage area is locked while the ship is underway.

Safe travels,
Seto Island Ferry Operations

Updated Baggage Tagging for Island Ferry Passengers — Questions

(24) Why must large wheeled suitcases be stored on the lower-deck racks sorted by color?

1 Only blue suitcases are allowed on Saturdays.

2 Suitcases float overboard if kept near windows.

3 The ferry stops at three ports for only six minutes each, requiring rapid unloading by destination.

4 Passengers sleep on the lower deck for twelve hours.

(25) Where on the suitcase should passengers attach the colored destination strap?

1 Around a side wheel.

2 Around the top handle.

3 Inside a zippered pocket.

4 Underneath the bottom corners.

(26) Why should passengers keep medicines and cameras in a small bag at their seat?

1 Small daypacks are forbidden on the upper deck.

2 Lower-deck racks reach fifty degrees Celsius.

3 Deckhands inspect all cameras at Takamatsu.

4 The lower luggage area stays locked while the ferry is moving.

Why Traditional Terraced Rice Fields Matter Beyond Harvests

Carved step by step into steep hillsides across Japan, the Philippines, southern China, and Indonesia, stone-and-earth terraced paddies—known in Japanese as tanada—look like shimmering mirrors in May and golden staircases in September. Built by hand over centuries where flat valley land was scarce, many mountain terraces now face abandonment because narrow, curved plots cannot accommodate large ride-on harvesters and aging farming populations find steep stone walls exhausting to maintain.

Judged strictly by tons of rice produced per hour of labor, tiny hillside paddies can never compete with vast laser-leveled plains. Yet hydrologists and municipal planners downstream have begun calculating the hidden public services those stepped fields perform every rainy season. Thousands of low earth bunds act collectively like a staircase of miniature check dams: instead of hurtling down bare slopes in destructive mudslides, typhoon rain pauses briefly in paddy after paddy, filtering slowly into mountain aquifers that feed clear village springs all winter.

Biodiversity thrives in that mosaic of shallow water and stone walls too. Rare frogs, dragonflies, and aquatic beetles that vanished from concrete-lined lowland canals depend on warm, pesticide-light terrace pools to breed, while wild herbs cling to dry stone risers.

Keeping terraces alive requires sharing the burden beyond individual farm households. Across Japan, "tanada ownership" programs invite city families to pay a modest annual fee and join four seasonal weekends—planting seedlings, weeding, harvesting by hand, and sharing freshly steamed rice with veteran farmers. Elsewhere, chefs pay premium prices for mineral-rich mountain-spring rice, and rural towns train young volunteers in dry-stone wall repair.

Preserving terraced hillsides is not mere nostalgia; it sustains living green infrastructure that protects valleys and culture together.

Why Traditional Terraced Rice Fields Matter Beyond Harvests — Questions

(27) Why are many traditional hillside rice terraces at risk of being abandoned today?

1 Narrow curved plots cannot fit large machinery, and maintaining steep walls strains aging farmers.

2 Mountain spring water turned too salty for rice.

3 Consumers stopped eating rice across Asia.

4 Stone walls dissolve during sunny May weather.

(28) How do terraced paddies protect downstream communities during heavy typhoon rains?

1 They heat typhoon rain into steam within minutes.

2 They pump rainwater back up into the clouds.

3 Their stepped earth bunds act like miniature dams, slowing runoff and recharging groundwater.

4 They block all water from ever reaching village springs.

(29) Why are traditional terraces valuable habitats for frogs, dragonflies, and aquatic insects?

1 No birds or frogs can reach steep hillsides.

2 Large harvesters bring insects up from cities.

3 Terraces stay frozen solid twelve months a year.

4 Shallow pools and stone walls preserve breeding spots lost in lowland canals.

(30) How do "tanada ownership" programs help sustain hillside paddies in Japan?

1 Tourists buy stone walls and ship them to apartments.

2 Corporations pave the terraces with asphalt parking lots.

3 City families pay a yearly fee and join seasonal fieldwork with local farmers.

4 Robots replace all human farmers overnight.

(31) What is the author's overall message about conserving terraced rice fields?

1 They should be judged solely by tons of grain harvested per hour.

2 They serve as green infrastructure for flood control, ecology, and culture.

3 Only flat laser-leveled plains deserve public support.

4 Terraces have no effect on downstream water supplies.
