Why Bakery Windows Fog Up Less Than Before

On cold winter mornings, small bakeries face a practical display problem. Warm steam rising from fresh trays of bread meets the icy glass of the front window and turns into tiny water droplets. While a misty window looks cozy in picture books, shop owners dislike it when passersby cannot see which breads have just come out of the oven.

Turning up the heater near the glass dries the window, yet dry hot air also makes uncovered croissants and crusty loaves lose moisture faster. A baker in Matsumoto found a simpler fix after talking with a neighbor who repaired eyeglasses. By installing a quiet ceiling fan that kept air moving gently across the glass and leaving a two-centimeter vent open near the top frame, the shop prevented warm damp air from sitting still against the cold pane. This adjustment (***21***) without drying out the bread.

Keeping the window clear had a welcome effect on morning sales. Commuters walking to the station could spot steaming walnut rolls from across the street and step inside on impulse. Sometimes solving an everyday shop problem requires (***22***) rather than buying a bigger heater.

(21)

1 froze every loaf of bread solid

2 kept the display glass clear all morning

3 blocked all sunlight from entering the shop

4 doubled the shop's monthly electricity bill

(22)

1 closing the bakery during winter months

2 hiding fresh bread in the back kitchen

3 understanding how air and moisture move

4 replacing glass windows with brick walls

From: Ayaka Mori, Costume Team Leader
To: Drama Club Cast Members
Subject: Costume fittings and shoe rules this week

Hi everyone,
Our regional high school drama festival is two weeks away, and all jackets and skirts for our play have now been hemmed! Individual fifteen-minute fittings will take place in Clubroom 4 on Wednesday and Thursday after school. Please check the time chart taped to the clubroom door and come wearing the thin T-shirt and leggings you will wear under your costume.

During last Saturday's run-through, the wooden stage at Civic Hall turned out to be more slippery than our school gym floor. Because leather-soled shoes slide easily when turning quickly, our advisor has asked everyone to attach thin rubber grip pads to the bottoms of their stage shoes. Our costume team bought enough pads for the whole cast; bring your stage shoes to your fitting so we can put them on together.

After Thursday's fittings, all costumes will be packed into garment bags for transport. Please do not take any costume pieces home to wash, as household detergent may change the dye color of the matching jackets.

See you Wednesday,
Ayaka

4A Preparing Costumes for the Drama Festival　設問 (23)〜(25)

(23) What should cast members wear when they come to their fitting?

1 Their winter coats and scarves.

2 Brand-new leather boots.

3 Their gym tracksuit over a sweater.

4 The thin T-shirt and leggings worn beneath their costume.

(24) Why do stage shoes need rubber grip pads attached to the bottoms?

1 The Civic Hall stage was found to be slippery during rehearsal.

2 Rubber pads make footsteps sound louder in the hall.

3 Leather shoes are not allowed inside Clubroom 4.

4 The cast will perform outdoors on wet grass.

(25) Why are members told NOT to wash costume pieces at home?

1 The costumes are made of paper.

2 There is no water in their neighborhood.

3 Dry cleaners will visit the school on Sunday.

4 Home detergent might alter the color of the matching jackets.

Teaching Buses and Trains to Wait Two Minutes

Missing a rural connecting bus by ninety seconds can turn a twenty-minute commute into an hour-long wait on a windy platform. In large cities, where another train arrives every four minutes, tight transfers rarely matter. Along regional rail lines and suburban bus corridors, however, vehicles run far less frequently, so a single delayed train can strand dozens of passengers who needed that connection.

Historically, bus drivers had no reliable way to know whether an approaching train was running two minutes late or twenty. Waiting blindly risked making every downstream stop late and causing passengers further along the route to miss their own appointments. As a result, most operators instructed drivers to depart strictly by the printed clock, even if a train was just pulling into the station.

Low-cost GPS trackers and shared dispatch screens have begun changing this rigid rule. In several mid-sized European and Japanese cities, trains and connecting buses now exchange live location updates automatically. If a train is delayed by three minutes or less—and the bus schedule has enough cushion on a quiet stretch of road to make up that time—the screen on the driver's dashboard flashes a "hold" request. Meanwhile, an announcement inside the train tells transferring riders that their bus is waiting at Stand 2, preventing dangerous sprinting on station stairs.

Of course, holding a bus is not always wise. When heavy snow delays a train by fifteen minutes, holding every feeder bus would paralyze the entire local network. Dispatch software therefore sets clear upper limits, typically three to five minutes, and prioritizes the last evening runs when no later bus exists.

Passenger surveys in towns using smart-hold rules show a notable jump in trust toward public transit. Knowing that operators coordinate across vehicles makes people far more willing to leave their cars at home for two-seat journeys.

4B Teaching Buses and Trains to Wait Two Minutes　設問 (26)〜(29)

(26) Why did bus drivers in the past usually leave strictly on time even when a train was late?

1 They were fined if passengers got on from a train.

2 They could not tell how late the train was and risked delaying later stops.

3 Station clocks ran ten minutes faster than bus clocks.

4 Rural buses had seats for only three passengers.

(27) What benefit does the announcement inside the train provide?

1 It sells discounted coffee tickets.

2 It tells riders to take a taxi instead.

3 It stops passengers from rushing dangerously down station stairs.

4 It lets passengers vote on the bus route.

(28) When does the dispatch system decide NOT to hold a connecting bus?

1 When a long delay, such as fifteen minutes in heavy snow, would disrupt the whole network.

2 Whenever even one passenger is transferring.

3 On quiet weekday evenings.

4 Whenever a train arrives thirty seconds late.

(29) How has smart-hold coordination affected local residents' behavior?

1 People have stopped riding trains in large cities.

2 More residents feel confident leaving cars at home for trips requiring a transfer.

3 Drivers have removed all printed timetables from bus stops.

4 Commuters now arrive at stations an hour late on purpose.
