第13回　｜　部分演習（筆記全体の制限時間は流用しません）　｜　選択問題 31問

■ 出題構成・自己採点記録表

大問	問題番号	出題形式・内容	設問数	自己採点・点検
1	(1)〜(17)	短文の語句空所補充	17問	／17
2	(18)〜(23)	長文の語句空所補充	6問	／6
3	(24)〜(31)	長文の内容一致選択	8問	／8

■ 演習・印刷の手引き

1. 問題冊子には正答や解説を載せていません。解答用紙はA4横マークシート（1ページ）です。
2. 印刷時は「白黒・実際のサイズ（100%）」を選ぶと、マーク欄や英作文罫線が本番見本に近い実寸で出力されます。
3. 解き終わるまでは「解答・解説」を開かず、本番と同じ時間配分を意識して取り組んでください。
4. 同じ選択問題はアプリの「分野別練習」、英作文課題はアプリの「ライティング練習」でも学習・保存できます。

1

次の(1)から(17)までの（ ）に入れるのに最も適切なものを1, 2, 3, 4の中から一つ選び、その番号のマーク欄をぬりつぶしなさい。

(1) To (　　) confusion among volunteers, color-coded armbands were handed out at the gate.

1 elaborate　**2** eliminate　**3** elevate　**4** emigrate

(2) In (　　) of his forty years of service as town librarian, Mr. Oda received a wooden plaque.

1 resistance　**2** reluctance　**3** resemblance　**4** recognition

(3) When an unexpected hailstorm struck the vineyard, mesh nets shielded the grapes (　　) bruising.

1 from　**2** into　**3** over　**4** onto

(4) Because the ferry pier is exposed to strong crosswinds, schedules remain (　　) to change.

1 superior　**2** similar　**3** subject　**4** sensitive

(5) Hardly had the outdoor concert begun (　　) distant lightning forced everyone into the hall.

1 than　**2** when　**3** that　**4** as

(6) Our drama club had to do (　　) stage spotlights after a fuse blew during dress rehearsal.

1 over　**2** away　**3** without　**4** into

1　短文の語句空所補充（続き）

(7) Before buying a secondhand bicycle, check that neither wheel rim has any noticeable (　　).

1 distinction　**2** distraction　**3** distribution　**4** distortion

(8) Ms. Kudo objected to (　　) asked to sign the repair contract without reading the fine print.

1 being　**2** be　**3** been　**4** have

(9) When the bakery's main mixer broke at dawn, two neighboring pastry chefs stepped (　　) to help.

1 down　**2** off　**3** out　**4** in

(10) It is vital that every hiker carrying a camp stove (　　) dry grass away from the burner.

1 clears　**2** clear　**3** cleared　**4** clearing

(11) Rising cocoa prices have prompted several confectioners to shrink bar sizes rather than raise (　　) prices.

1 rigid　**2** remote　**3** retail　**4** rural

(12) Much (　　) I admire her watercolor landscapes, I prefer her bold charcoal portraits.

1 as　**2** if　**3** unless　**4** because

1　短文の語句空所補充（続き）

(13) The city library extended its weekday closing hour to nine p.m. to (　　) commuters and high schoolers.

1 accumulate　**2** accommodate　**3** accuse　**4** accompany

(14) All emergency stairwell doors must remain free of boxes and bicycles without (　　).

1 exception　**2** exhibition　**3** expansion　**4** extension

(15) Had the harbor master not closed the seawall gates at noon, the storm tide (　　) flooded the fish market.

1 has　**2** will have　**3** had　**4** would have

(16) After six months of physical therapy, the pitcher's shoulder strength was back on (　　) with last season.

1 pace　**2** part　**3** par　**4** peak

(17) Unlike glossy magazine paper, uncoated cream stock reduces eye fatigue by softening reflected (　　).

1 gloom　**2** glare　**3** grain　**4** grace

2 A

次の英文を読み、その文意にそって(18)から(20)までの（ ）に入れるのに最も適切なものを1, 2, 3, 4の中から一つ選び、その番号のマーク欄をぬりつぶしなさい。

Why Coin Edges Have Tiny Vertical Ridges

Run your fingernail around the rim of a hundred-yen or fifty-yen coin—or an American quarter or dime—and you feel dozens of crisp vertical grooves, whereas ten-yen and five-yen coins feel completely smooth. Cashiers and vending-machine engineers appreciate that texture today, yet "reeded edges" were invented more than three centuries ago to stop a widespread financial crime.

In seventeenth-century Europe, high-value coins were struck from pure silver or gold whose metal was worth exactly the face value stamped on the coin. Dishonest traders took advantage of soft precious metals by "clipping"—shaving tiny slivers of silver off the irregular edges of hundreds of coins before spending them at full value and melting the scraps into bullion bars. Over time, clipped coins grew noticeably smaller and lighter, undermining trust in everyday commerce. (***18***), Britain's Royal Mint—guided in the 1690s by warden Isaac Newton—introduced collar dies that stamped uniform grooves around every silver and gold coin's circumference.

With milled ridges in place, shaving even half a millimeter off a coin's rim immediately erased the grooves and exposed the tampering at a glance. Modern coins use cupronickel alloys rather than pure silver, so clipping for bullion is long gone. (***19***), reeded edges remain invaluable because they let blind and visually impaired shoppers distinguish denominations instantly by touch inside a purse.

Tiny ridges around a coin show how an anti-counterfeiting fix evolved into (***20***).

(18)　**1** By coincidence　**2** On the contrary　**3** Otherwise　**4** To halt this fraud

(19)　**1** Even so　**2** Consequently　**3** For example　**4** Previously

(20)

1 smooth copper edges on every banknote

2 a way to melt silver coins at grocery checkouts

3 an everyday accessibility feature for millions of users

4 heavier gold bars inside modern vending machines

2 B

How Kelp Farming Cleans Coastal Bays Without Land or Fertilizer

Expanding global food production on land almost always demands three scarce inputs: cleared soil, fresh irrigation water, and synthetic nitrogen or phosphorus fertilizer. Along cool rocky coastlines from Hokkaido and Iwate to Maine, Norway, and Scotland, however, marine farmers are scaling up a crop that requires zero farmland, zero freshwater, and zero added chemicals: sugar kelp and wakame seaweed.

Suspended from horizontal ropes anchored a few meters below winter waves, young kelp blades absorb dissolved carbon dioxide, nitrogen, and phosphorus straight out of passing seawater using winter sunlight. In bays overloaded with agricultural runoff or fish-farm waste, kelp lines act like underwater air-and-water purifiers. Lifting excess nutrients out of coastal water curbs harmful summer algal blooms, while rapid photosynthesis locally lowers seawater acidity enough to help nearby oysters and scallops build stronger shells. (***21***), dense fronds create temporary shelter for juvenile cod, crabs, and seahorses before spring harvest.

Harvested kelp goes far beyond miso soup and salad bowls. Food technologists extract natural alginates to thicken ice cream and wound dressings; livestock researchers mix small amounts of dried seaweed into cattle feed; and packaging startups mold kelp fibers into home-compostable takeout trays. (***22***), fisherman cooperatives can farm kelp from November to April when rough winter seas limit boat fishing, stabilizing year-round coastal incomes.

Thoughtfully sited away from shipping lanes, regenerative seaweed farming shows how ocean aquaculture can (***23***).

(21)

1 On the contrary　**2** Meanwhile　**3** Otherwise　**4** In vain

(22)

1 Instead of ropes　**2** Conversely　**3** Better still　**4** Reluctantly

(23)

1 keep fishing boats docked all summer long

2 replace ocean water with fresh river irrigation

3 increase nitrogen runoff into shallow summer bays

4 produce useful materials while leaving coastal ecosystems healthier

3 A 次のEメールの内容に関して、(24)から(26)までの質問に対する答えとして最も適切なもの、または文を完成させるのに最も適切なものを1, 2, 3, 4の中から一つ選びなさい。

From: Special Collections Desk, Prefectural Central Library
To: High School Local History Research Groups
Subject: Pencil-only rule and cotton weights for Saturday's map session

Dear student researchers,
We have pulled the six nineteenth-century coastal survey maps your teachers requested for Saturday's 1:30 p.m. research appointment in the Third-Floor Archive Reading Room.

Because hand-colored rice-paper maps tear and stain easily, all backpacks, coats, pens, highlighters, and bottled drinks must be locked in the hallway lockers before entering. You may bring only loose note sheets, a laptop or tablet (camera flash turned off), and wooden graphite pencils; mechanical pencils are not allowed because thin snapped leads can get trapped in map folds and scratch pigment.

Please use the soft cloth-covered lead "snake weights" on the tables—never your elbows or textbooks—to hold curled map corners flat.

Special Collections Staff

3A　Instructions for Borrowing Rare Maps in the Archive Room　設問 (24)〜(26)

(24) Why are mechanical pencils prohibited inside the Archive Reading Room?

1 Broken thin leads can lodge in map folds and scratch delicate pigments.

2 Graphite cannot write on loose note sheets.

3 Mechanical pencils set off fire alarms.

4 Only blue ink fountain pens are allowed.

(25) Which items ARE students allowed to bring into the reading room?

1 Coats and ballpoint pens.

2 Backpacks, bottled green tea, and yellow highlighters.

3 Heavy school textbooks to hold map corners down.

4 Loose note paper, a flash-off laptop or tablet, and wooden pencils.

(26) What should students use to keep curled corners of old maps flat?

1 Their elbows while taking notes.

2 Soft cloth-covered weights provided on the tables.

3 Cellophane tape from home.

4 Bottles of cold water.

3 B

次の英文の内容に関して、(27)から(31)までの質問に対する答えとして最も適切なもの、または文を完成させるのに最も適切なものを1, 2, 3, 4の中から一つ選びなさい。

How Wildlife Overpasses Reconnect Divided Forests

On highway maps, a new four-lane expressway cutting across a mountain range looks like a thin ribbon just thirty meters wide. To deer, bears, badgers, and forest tortoises living on either side, however, unfenced high-speed traffic—or twin rows of tall crash fencing—acts like an impassable concrete canyon. Wildlife biologists studying roads over the past forty years found that slicing one large forest into isolated patches does far more harm than roadkill collisions alone.

Cut off from neighboring valleys, small animal populations lose access to seasonal food—such as low-valley oak acorns in autumn—and begin inbreeding within a few generations, weakening genetic resistance to disease. Early highway engineers tried installing narrow concrete drainage pipes beneath roads, assuming animals would crawl through them. While foxes and raccoons adapted quickly to dark tunnels, cautious grazing mammals such as elk and deer refused to enter cramped spaces where predators might ambush them.

Canada's Banff National Park pioneered a bolder answer in the 1990s along the Trans-Canada Highway: wide, soil-covered "wildlife overpasses" fifty meters broad, planted with native shrubs, pine trees, and log piles so the bridge looks and smells like a continuous forest clearing from an animal's eye level. Low earth berms along the sides block headlight glare and tire roar from trucks passing underneath.

Motion-triggered infrared cameras across Banff's six overpasses and thirty-eight underpasses have recorded more than two hundred thousand safe crossings by grizzlies, wolves, moose, and lynx, slashing large-mammal vehicle collisions by over eighty percent—a major win for human driver safety and auto insurers as well.

Today, countries from the Netherlands and Germany to Japan and the United States build green bridges into new road budgets from the start, proving that transport networks and wildlife corridors can share the same landscape.

3B　How Wildlife Overpasses Reconnect Divided Forests　設問 (27)〜(31)

(27) Beyond vehicle collisions, what deeper ecological harm happens when highways split a large forest?

1 Foxes and raccoons forget how to walk at night.

2 Trees within five kilometers of roads stop producing acorns.

3 Isolated animal groups lose seasonal food routes and suffer reduced genetic diversity.

4 Forest rivers begin flowing uphill.

(28) Why did cautious animals like deer and elk avoid early narrow drainage pipes under roads?

1 They feared entering tight, dark spaces where predators could hide in ambush.

2 Drainage pipes were heated to sixty degrees Celsius.

3 Cars drove through the drainage pipes at night.

4 Only birds were allowed inside concrete pipes.

(29) How are Banff's wildlife overpasses designed to feel natural and safe for crossing animals?

1 They are painted bright neon yellow with loud music speakers.

2 They are wide, covered with soil and native plants, and bordered by earth berms that block light and noise.

3 They use moving escalators made of glass.

4 They open only for ten minutes on Sunday mornings.

(30) How did Banff's crossing structures benefit human drivers as well?

1 Collisions between vehicles and large mammals dropped by more than eighty percent.

2 Highway speed limits were raised to two hundred kilometers per hour.

3 Toll fees were eliminated across all of North America.

4 Grizzly bears began directing traffic in winter.

(31) What broader trend is highlighted in the final paragraph?

1 Infrared cameras are replacing bridges altogether.

2 All highways through forests are being torn down globally.

3 Only Canada has ever built a wildlife overpass.

4 Several countries now include green wildlife bridges directly in initial road-building plans.
