Summer Pottery Painting Class

Paint Your Own Wind Chime! – Chuo Youth Center
Sunday, July 19 | 1:30 p.m. – 3:00 p.m.
Fee: 300 yen for paint & bell | For Junior High Students

Cool down your room this summer with the clear ring of a ceramic wind chime (furin)! Each participant receives an unglazed white clay bell and waterproof paints to draw goldfish, fireworks, or original patterns. Your chime dries in twenty minutes, so you can take it home the same day! Register by phone by July 15.

(21) When can participants take their painted wind chimes home?

1 Only after winter break.

2 One month later in August.

3 On the same day, since the paint dries in twenty minutes.

4 Never—all chimes stay at the center.

(22) How much does it cost to join the class?

1 Nineteen hundred yen.

2 Free of charge.

3 One thousand five hundred yen.

4 Three hundred yen.

Returning Borrowed Camp Lanterns

From: Kenta
To: Mr. Shibata, Neighborhood Association Leader
Subject: Thank you for the LED lanterns + returning them Tuesday

Dear Mr. Shibata,
Thank you very much for lending our Boy Scout troop four rechargeable LED lanterns for our weekend camp at Lake Inawashiro! When fog rolled across our campsite on Saturday evening, hanging them at the corners of our cooking tent kept everyone safe while making curry.

We wiped the mud off the bases and recharged all four batteries to 100 percent last night. My father and I can bring the storage case to the community shed at 6:00 p.m. tomorrow (Tuesday)—will someone be there?

Best regards,
Kenta Sato

(23) How did the four LED lanterns help Kenta's troop on Saturday evening?

1 They lit the corners of the cooking tent safely when fog rolled in.

2 They heated water for hot baths.

3 They scared wild bears away from a boat.

4 They charged everyone's mobile phones.

(24) What did Kenta's group do before packing the lanterns back up?

1 They painted the lanterns bright yellow.

2 They wiped mud off the bases and recharged all four to 100 percent.

3 They removed the batteries and threw them away.

4 They left one lantern at Lake Inawashiro.

(25) Why is Kenta writing to Mr. Shibata about Tuesday at 6:00 p.m.?

1 To check whether someone will be at the community shed when he and his father return them.

2 To borrow ten more tents for Wednesday.

3 To invite Mr. Shibata to Lake Inawashiro.

4 To ask how to cook curry rice.

The Left-Handed Can Opener

Fifteen-year-old Soma was the only left-handed person in his family. Most days he barely thought about it, though using classroom scissors or pouring soup from ladles with spouts on only one side always felt awkward.

During a home economics cooking test in October, each student had to open a tin of sweet corn within two minutes. As right-handed classmates twisted standard crank-style openers effortlessly, Soma struggled: holding the handle in his left hand forced the cutting wheel outward, slipping off the metal rim again and again.

Seeing Soma's frustration, his home economics teacher, Ms. Ide, didn't deduct points. Instead, she brought three kitchen tools to the next class—a butterfly opener that worked from either side, ambidextrous kitchen shears, and a ladle with spouts on both sides—and asked right-handed students to try opening a paper cup using their non-dominant left hand.

Gasps of "That's so tricky!" echoed around the room. Experiencing that small hurdle firsthand got the whole class noticing universal design on station ticket gates, shampoo bottles, and rulers all week.

The Left-Handed Can Opener — Questions

(26) What everyday items had always felt awkward for Soma as a left-handed user?

1 Soccer balls and running shoes.

2 Standard black pencils and erasers.

3 Classroom scissors and soup ladles with a spout on only one side.

4 Chopsticks and rice bowls.

(27) What happened when Soma tried to open the corn tin during the October cooking test?

1 The tin was empty inside.

2 He opened three tins faster than anyone else.

3 He spilled sweet corn onto Ms. Ide's shoes.

4 Holding the standard opener in his left hand made the wheel slip off the rim repeatedly.

(28) How did Ms. Ide respond in the following home economics class?

1 She banned canned corn from school forever.

2 She brought universal-design tools and let right-handed students try tasks with their left hand.

3 She made Soma write a five-page apology.

4 She replaced all stoves with microwave ovens.

(29) How did right-handed classmates react when trying with their left hand?

1 They fell asleep at their cooking tables.

2 They finished in one second without looking.

3 They were surprised by how tricky it felt.

4 They refused to touch paper cups.

(30) What broader awareness did the class gain from the experience?

1 They all switched permanently to writing with their left hands.

2 They started noticing universal design features on everyday items around town.

3 They stopped taking home economics tests.

4 They decided never to use shampoo bottles again.
