英検準2級
リーディングトレーニング

第9回 問題冊子

リスニング・英作文を含まない部分練習 ／ 全29問

大問	問題番号	内容
1	1〜15	短文の語句空所補充
2	16〜20	会話文の空所補充
3	21〜22	長文の語句空所補充
4	23〜29	読解

使い方

・解答用紙に答えを記入してください。問題冊子には正答を載せていません。
・問題・解説はA4縦、解答用紙はA4横。白黒・片面・実際のサイズ（100%）で印刷します。
・解き終わるまでは、別冊の解答・解説を開かないでください。
・同じ問題をアプリの分野別練習でも解けます。

独自作成した英検準2級形式のリーディング第9回です。リスニング・英作文・面接は含みません。公式教材ではなく、CSE・合否換算はしません。筆記全体の公式時間をリーディングだけの時間に流用しません。外部難度校正は未実施です。

氏名：＿＿＿＿＿＿＿＿＿＿＿＿＿＿＿＿＿＿＿＿

会話文の空所補充
1〜4から最も適切な答えを一つ選び、解答用紙にマークしてください。

(16) A: Excuse me. Is this gallery ticket valid for the ceramic exhibition across the courtyard too?
B: ( ) However, you can add it for just two hundred yen.
A: Let's add it, then!

1 That ticket covers only the main hall.
2 Yes, everything is completely free.
3 Courtyards have no roofs.
4 The museum closed in 1995.

(17) A: How come you brought two pairs of socks to tennis camp?
B: ( ) Playing in damp socks gives me blisters.
A: Smart thinking—I wish I'd packed an extra pair.

1 The camp was last winter.
2 I don't own any tennis rackets.
3 Socks are worn on hands.
4 One pair is for the afternoon session.

(18) A: Could you look at my tablet? The Wi-Fi icon keeps disappearing.
B: ( ) Restarting the wireless router usually fixes it.
A: Oh, let's ask the librarian before changing any settings.

1 Throw the tablet in water.
2 Other laptops at this table seem disconnected too.
3 I never use electricity.
4 Tablets are lighter than desks.

(19) A: Did you manage to get seats together on the bullet train for Friday?
B: ( ) Still, we're in the same car, just two rows apart.
A: That's totally fine for a ninety-minute ride.

1 Yes, three seats side by side.
2 Trains don't run on Fridays.
3 Not quite—all paired seats were booked.
4 I'm driving a truck instead.

(20) A: Thanks for watering our herb pots while we visited Nagasaki!
B: ( ) The basil smelled amazing every evening.
A: Take a bunch home for pasta tonight!

1 Anytime!
2 Sorry, all the herbs died.
3 Nagasaki is in Hokkaido.
4 I forgot where you live.

Why Coastal Towns Paint Lighthouses in Distinct Stripes

Postcards of seacoasts often show a tall white lighthouse standing on a rocky headland. Travel along an actual coastline, however, and you quickly notice that neighboring lighthouses rarely look identical: one wears bold red-and-white horizontal bands, another spirals like a black-and-white barber pole, and a third is painted solid yellow.

At night, sailors identify lighthouses by their unique flash rhythm—for instance, two quick flashes every ten seconds. During daylight hours, however, a flashing lamp is hard to spot against bright sky or sea glare. Before satellite navigation existed, captains steering along a foggy coast with binoculars needed an unmistakable visual daytime marker, known to mariners as a "daymark." Giving adjacent towers contrasting patterns ensured that (21).

Background scenery also guides color choice. A pure white tower stands out sharply against dark pine forests, yet vanishes against chalk cliffs or winter snowdrifts, where red bands remain vivid. Even today, when ships carry digital chart plotters, maritime authorities maintain these painted daymarks as (22) whenever electronics fail at sea.

(21)

1 lighthouse keepers never had to buy paintbrushes

2 tourists could climb the outside of the tower without stairs

3 fish would swim directly into harbor nets at noon

4 crews would not mistake one headland for another fifty kilometers away

(22)

1 a dependable backup that requires no electricity or satellite signal

2 a decoration only for summer music festivals

3 a way to hide harbors from passing passenger ferries

4 an advertisement for local paint factories

Preparing Bicycles for the Lake Charity Ride

From: Lake Aoi Charity Ride Committee
To: Youth Category Riders
Subject: Helmet labels and water-station rules for Sunday

Dear riders,
Only five days remain until our 30-kilometer Lake Aoi Charity Ride! The weather outlook for Sunday is mild and dry, with light morning wind.

When you pick up your rider packet on Saturday afternoon (1:00 p.m. – 5:00 p.m. at Lakeshore Park Tent A), you will receive two matching number stickers: place the small sticker on the front of your helmet and wrap the long sticker around your seat post so marshals can record your checkpoint times.

To keep plastic waste off the lakeshore, our three rest stations will not hand out disposable paper or plastic cups. Instead, volunteers will refill riders' own bicycle water bottles from chilled tanks, along with sliced bananas and salt candies. Please arrive at the start corral by 8:15 a.m. with a full bottle.

Ride safely and enjoy the lake views!
Event Committee

Preparing Bicycles for the Lake Charity Ride — Questions

(23) Where should riders attach the two number stickers?

1 On both shoes.

2 On the front of their helmet and around their seat post.

3 On their water bottle and backpack.

4 Inside their wallet.

(24) Why won't rest stations hand out disposable cups?

1 Riders are not allowed to drink water during the 30-kilometer ride.

2 Volunteers forgot to order cups.

3 To prevent plastic and paper waste along the lakeshore.

4 Cold water freezes paper cups instantly.

(25) What should riders bring to the start corral by 8:15 a.m.?

1 A box of disposable cups.

2 Their own full bicycle water bottle.

3 Three bunches of bananas.

4 A tent for Saturday afternoon.

Why Old Bridges Were Built with Roofs

Travel through rural valleys in Switzerland, Austria, North America, or parts of Japan, and you may cross a wooden bridge that looks remarkably like a long narrow barn floating above a river. Tourists often assume the roof and side walls were added so travelers and horses could stay dry during sudden storms—or so nervous farm animals would not fear the rushing water below.

While shelter was a pleasant bonus, carpenters of the eighteenth and nineteenth centuries had a much more practical structural reason: protecting the heavy timber trusses underneath from rot. An uncovered wooden bridge exposed to rain, snow, and summer sun typically needed major replacement within fifteen to twenty years. Water seeped into joints where beams met, froze and expanded in winter, and invited wood-eating fungi.

Adding a lightweight roof and shingle siding cost extra lumber at the start, yet shielded the load-bearing beams from moisture. When minor roof shingles wore out, villagers could replace them cheaply without closing the bridge or rebuilding its main frame. Protected this way, many covered timber bridges lasted eighty to over a hundred years—four or five times longer than open wooden spans.

When affordable steel and reinforced concrete arrived in the twentieth century, engineers no longer needed roofs to weatherproof bridges. Nevertheless, communities that preserved historic covered bridges have gained unexpected value: calm pedestrian crossings, local landmarks, and living lessons in resource-saving craftsmanship.

Sometimes the smartest way to make a structure endure is not choosing a rarer material, but keeping everyday weather off its bones.

Why Old Bridges Were Built with Roofs — Questions

(26) What do tourists often mistakenly believe was the main purpose of roofs on wooden bridges?

1 To collect rainwater for nearby rice fields.

2 To support heavy railway locomotives on top of the roof.

3 To hide boats passing underneath.

4 To shelter travelers from storms or calm nervous farm animals.

(27) Why did uncovered wooden bridges usually deteriorate within fifteen to twenty years?

1 Water entered beam joints, froze in winter, and encouraged wood-rotting fungi.

2 Fish chewed the stone pillars.

3 Sunlight turned oak beams into soft ash.

4 Carriages drove across them at a hundred kilometers per hour.

(28) How much longer could a covered timber bridge last compared with an open wooden bridge?

1 Only two months longer.

2 Roughly the same number of years.

3 Four or five times longer, often eighty to over a hundred years.

4 Exactly ten thousand years without any repair.

(29) Why did engineers stop building roofs over most new bridges in the twentieth century?

1 Carpenters forgot how to cut wooden shingles.

2 Pedestrians disliked walking in the shade.

3 Laws banned roofs near all rivers.

4 Steel and reinforced concrete could withstand weather without needing a roof.
