MANATOBI / ORIGINAL PRACTICE

英検準2級
リーディングトレーニング

第14回 問題冊子

リスニング・英作文を含まない部分練習 ／ 全29問

大問	問題番号	内容
1	1〜15	短文の語句空所補充
2	16〜20	会話文の空所補充
3	21〜22	長文の語句空所補充
4	23〜29	読解

使い方

・解答用紙に答えを記入してください。問題冊子には正答を載せていません。
・問題・解説はA4縦、解答用紙はA4横。白黒・片面・実際のサイズ（100%）で印刷します。
・解き終わるまでは、別冊の解答・解説を開かないでください。
・同じ問題をアプリの分野別練習でも解けます。

独自作成した英検準2級形式のリーディング第14回です。リスニング・英作文・面接は含みません。公式教材ではなく、CSE・合否換算はしません。筆記全体の公式時間をリーディングだけの時間に流用しません。外部難度校正は未実施です。

氏名：＿＿＿＿＿＿＿＿＿＿＿＿＿＿＿＿＿＿＿＿

1

短文の語句空所補充
1〜4から最も適切な答えを一つ選び、解答用紙にマークしてください。

(1) The city ferry can ( ) up to two hundred passengers and twelve cars.

1 exaggerate **2** hesitate **3** accommodate **4** accelerate

(2) On ( ) of heavy snowfall, all expressway buses bound for Nagano were suspended.

1 account **2** behalf **3** purpose **4** average

(3) Adding a pinch of salt brings out the natural ( ) of ripe watermelon.

1 shyness **2** sickness **3** sharpness **4** sweetness

(4) To my ( ), the lost wallet still had every bill and train pass inside.

1 belief **2** relief **3** grief **4** brief

(5) This stainless-steel mug keeps soup hot for six hours, ( ) of outside weather.

1 helpless **2** careless **3** regardless **4** speechless

(6) Only a ( ) of tickets remained for Sunday's jazz concert.

1 armful **2** mouthful **3** spoonful **4** handful

(7) Please take your belongings with you and leave nothing ( ) on the bus.

1 behind **2** beside **3** beyond **4** beneath

(8) Having ( ) up in a port town, Mr. Sato predicts winds from cloud shapes.

1 grow **2** grown **3** grew **4** growing

(9) Our club couldn't afford new uniforms; we made ( ) with repaired jerseys.

1 do **2** up **3** out **4** off

(10) Stretch your calves after jogging; ( ), your legs may feel stiff tomorrow.

1 meanwhile **2** moreover **3** otherwise **4** likewise

1　短文の語句空所補充（続き）

(11) The antique globe is believed to (　　) been crafted in Venice around 1750.

1 having　**2** has　**3** had　**4** have

(12) No sooner had we spread our picnic mat (　　) big raindrops began to fall.

1 when　**2** than　**3** as　**4** that

(13) The tailor measured Toma's shoulders accurately and altered the jacket to (　　) him.

1 fill　**2** fix　**3** fit　**4** find

(14) Rarely (　　) wild fireflies appear beside rivers polluted with detergent.

1 are　**2** do　**3** have　**4** were

(15) Let's compare ticket prices across three websites before we jump to a (　　).

1 decision　**2** division　**3** dimension　**4** discussion

2

会話文の空所補充
1〜4から最も適切な答えを一つ選び、解答用紙にマークしてください。

(16) A: Excuse me. Why won't the self-checkout screen scan my loaf of bread?
B: (　　) Let me type the bakery code in for you.
A: Oh, I see—thank you!

1 The supermarket is closed now.
2 You already paid yesterday.
3 Bread is not food.
4 Freshly baked loaves don't have barcodes on the bag.

(17) A: How did your younger brother like his first overnight camp with the scouts?
B: (　　) Now he's already asking when the autumn camp is!
A: Haha, sounds like he caught the camping bug!

1 He didn't go to camp.
2 He hated every minute and quit.
3 He was homesick the first hour, then had a blast!
4 Next November.

(18) A: Should we take the coastal road or the mountain tunnel to Izu?
B: (　　) Traffic reports say a truck broke down inside the tunnel.
A: Coastal road it is, then—plus we'll see the ocean!

1 Definitely the coastal road today.
2 Let's go through the tunnel.
3 Neither—we are in Hokkaido.
4 By bullet train yesterday.

(19) A: I'm thinking of repotting my indoor fern into a pot twice as wide.
B: (　　) Going just one size bigger keeps the roots from rotting.
A: Good thing I asked you before buying a giant pot!

1 Water it with salt water.
2 Yes, buy a pot ten times bigger!
3 Ferns are plastic flowers.
4 Actually, too much wet soil can drown the roots.

(20) A: Do you mind if I borrow your stapler for a minute, Mr. Aoki?
B: (　　) Just press gently—it jams if you hit it hard.
A: Will do, thanks!

1 Yes, I mind—nobody can touch it.
2 Help yourself—it's right by the monitor.
3 Staplers use glue.
4 Five hundred sheets of paper.

Why Ambulance Sirens Change Pitch as They Pass

Stand on a sidewalk as an ambulance or express train rushes past, and you hear a familiar sound pattern: the siren sounds noticeably higher-pitched while approaching you, then drops sharply in pitch the instant the vehicle passes and speeds away. The siren speaker on the roof hasn't changed its note at all—the driver inside hears the exact same tone the whole time. Physicists call this everyday shift the "Doppler effect."

Sound travels through air as invisible waves of compressed molecules, much like ripples spreading across a pond. While an ambulance sits parked at a red light, siren waves spread outward in evenly spaced circles in every direction. Once the vehicle races forward at sixty kilometers per hour, however, it chases after its own front sound waves, squeezing consecutive wave crests closer together ahead of the bumper and stretching them farther apart behind the rear doors. Because our ears perceive closer-spaced waves as a higher musical note, bystanders ahead (21).

Astronomers and meteorologists put this exact principle to work far beyond city streets. Weather radar bounces radio waves off moving raindrops to measure wind speeds inside typhoons, while shifting starlight tells astrophysicists whether distant galaxies are (22).

(21)

1 feel strong wind blowing backward into the siren speaker

2 hear complete silence until the ambulance stops at the hospital

3 hear a higher pitch than people standing behind the departing vehicle

4 hear the exact same pitch whether the vehicle approaches or retreats

(22)

1 warming ocean water around tropical islands

2 switching on ambulance sirens on rainy nights

3 floating inside small ponds on city sidewalks

4 moving toward Earth or speeding away through space

Badminton Doubles Equipment Check Rules

From: Tournament Referee Committee
To: Participating School Captains
Subject: Uniform name prints and string-stencil rules for Saturday

Dear team captains,
Welcome to Saturday's Prefectural High School Badminton Doubles Preliminary at East Arena! Doors open at 8:10 a.m., and equipment inspection starts at 8:30 a.m. beside Court 1.

Please remind every pair on your team of two uniform rules that caused delays last spring. First, both partners in a doubles pair must wear shirts of the same base color, with the school name printed clearly across the back in characters six to ten centimeters tall; handwritten tape labels are not accepted in official rounds.

Second, bring at least two strung rackets per player, as court play will not pause for broken strings. Indoor non-marking court shoes must be put on AFTER entering the locker corridor, never worn across the parking lot.

Referee Committee

Badminton Doubles Equipment Check Rules — Questions

(23) What shirt requirement applies to both partners in a doubles pair?

1 Wearing the same base color with the school name printed clearly on the back.

2 Attaching handwritten paper tape across the front pocket.

3 Wearing completely opposite colors so referees can tell them apart.

4 Leaving the back of the shirt completely blank.

(24) Why must each player bring at least two strung rackets?

1 Players must hold one racket in each hand while serving.

2 Matches will not pause if a player's racket string breaks during play.

3 Referees collect one racket as an entry fee.

4 Court 1 is twice as wide as normal courts.

(25) When should players put on their indoor court shoes?

1 Only after entering the locker corridor inside the arena.

2 Before getting on the team bus at school.

3 While walking across the asphalt parking lot.

4 After their first match finishes.

How Botanical Gardens Use Wood Libraries

When visitors stroll through a botanical garden or natural history museum, pressed leaves and dried blossoms in herbarium cabinets usually come to mind as plant collections. Tucked away in climate-controlled basements from Kew Gardens in London to Kyoto and Madison, Wisconsin, however, researchers curate a lesser-known archive that looks like a carpenter's dream bookshelf: thousands of polished rectangular blocks of wood shelved spine-out like hardcover novels, known as a "xylarium."

Carved from documented trees collected around the globe over the past two centuries, each block records a species' unique cellular architecture. Slice a sliver of wood thinner than tissue paper and place it under a microscope, and its water-conducting vessels, rays, and growth rings form a fingerprint as distinctive as human DNA—even decades after a tree was felled and turned into furniture or flooring.

That anatomical library now plays a frontline role against illegal logging, one of the world's most destructive wildlife crimes. Rare tropical rosewoods, mahoganies, and ebonies protected by international treaties look nearly identical to legal plantation timber once sawn into smooth planks and stacked inside shipping containers. Customs officers at ports used to rely on paper export certificates that smugglers easily forged.

By training portable machine-vision cameras and chemical spectrometers on verified xylarium blocks, wood anatomists have given border inspectors field tools that identify protected tree species on the dock within minutes.

Old museum blocks have helped art historians and luthiers too—dating medieval oak panels and matching repair wood for historic bridges—proving that carefully cataloged specimens gain unexpected value long after they are collected.

How Botanical Gardens Use Wood Libraries — Questions

(26) What does a "xylarium" collection look like inside a research institution?

1 Jars of liquid flower perfume.

2 Living tropical trees planted on glass rooftops.

3 Shelves of documented, polished wood blocks arranged like books.

4 Stacks of daily newspapers printed on recycled pulp.

(27) How can scientists identify a tree species from a tiny slice of wood decades after it was cut?

1 All tropical trees weigh ten times more than oak.

2 Every tree trunk has its Latin name written naturally inside the bark.

3 Fresh leaves keep growing out of dry furniture planks.

4 Each species has a distinct microscopic pattern of vessels, rays, and rings.

(28) Why did port customs officers previously struggle to catch illegally logged rare timber?

1 Shipping containers were transparent and never entered ports.

2 Sawn planks of protected trees look very similar to legal timber, and paper certificates could be faked.

3 International treaties protected every tree species equally.

4 Illegal loggers shipped whole trees with roots and birds still attached.

(29) How have xylarium collections strengthened port inspections recently?

1 Customs officers burn a corner of every plank to smell the smoke.

2 Scientists mail heavy museum bookshelves to every cargo ship.

3 Verified specimens were used to train portable cameras and spectrometers that identify protected wood in minutes.

4 Ports banned all wooden furniture worldwide.
