MANATOBI / ORIGINAL PRACTICE

英検準2級プラス リーディングトレーニング

第2回 問題冊子

リスニング・英作文を含まない部分練習 ／ 全31問

大問	問題番号	内容
1	1〜17	短文の語句空所補充
2	18〜23	長文の語句空所補充
3	24〜31	読解

使い方

・解答用紙に答えを記入してください。問題冊子には正答を載せていません。
・問題・解説はA4縦、解答用紙はA4横。白黒・片面・実際のサイズ（100%）で印刷します。
・解き終わるまでは、別冊の解答・解説を開かないでください。
・同じ問題をアプリの分野別練習でも解けます。

独自作成した英検準2級プラス形式のリーディング第2回です。リスニング・英作文・面接は含みません。公式教材ではなく、CSE・合否換算はしません。筆記全体の公式時間をリーディングだけの時間に流用しません。外部難度校正は未実施です。

氏名：＿＿＿＿＿＿＿＿＿＿＿＿＿＿＿＿＿＿＿＿

1

短文の語句空所補充
1〜4から最も適切な答えを一つ選び、解答用紙にマークしてください。

(1) The historic theater was closed for six months so workers could ( ) its damaged wooden ceiling.

1 relieve **2** restore **3** resemble **4** resign

(2) Because the ferry schedule varies by season, travelers should confirm departure times in ( ).

1 contrast **2** person **3** general **4** advance

(3) Although the new battery is slightly heavier, its longer life more than ( ) for the extra weight.

1 makes up **2** puts up **3** takes over **4** gives in

(4) The research team found a strong ( ) between regular morning walks and better sleep quality.

1 lack **2** load **3** link **4** leak

(5) All visitors entering the clean laboratory are required to wear protective coats without ( ).

1 impression **2** ambition **3** extension **4** exception

1　短文の語句空所補充（続き）

---

(6) At first, residents were (　　) to try the new recycling system, as sorting rules seemed complicated.

1 grateful　**2** reluctant　**3** confident　**4** eager

(7) The mayor promised to (　　) the issue of narrow sidewalks near the station during the next budget review.

1 abandon　**2** admire　**3** address　**4** absorb

(8) Even experienced hikers can lose their sense of direction when thick fog reduces (　　) to a few meters.

1 visibility　**2** hospitality　**3** popularity　**4** curiosity

(9) Rather than buying every tool individually, neighbors can cut expenses (　　) by sharing rarely used equipment.

1 accidentally　**2** barely　**3** considerably　**4** temporarily

(10) The bakery's sourdough bread is so popular that customers must reserve a loaf beforehand; (　　), it sells out by noon.

1 meanwhile　**2** moreover　**3** therefore　**4** otherwise

1　短文の語句空所補充（続き）

(11) Volunteers distributed maps in three languages to ensure that international guests felt (　　) at the festival.

1 awkward　**2** welcome　**3** urgent　**4** strict

(12) The museum curator emphasized that the ancient scroll was too (　　) to be exposed to bright sunlight.

1 fragile　**2** flexible　**3** frequent　**4** fluent

(13) We could not reach an agreement on Monday because two key members were absent (　　) a train delay.

1 apart from　**2** prior to　**3** in terms of　**4** owing to

(14) Before launching the mobile app nationwide, the company tested it in one city to (　　) minor software bugs.

1 imitate　**2** ignore　**3** identify　**4** inherit

(15) Students are advised not to rely (　　) on online summaries when writing history reports.

1 solely　**2** vividly　**3** frankly　**4** promptly

1　短文の語句空所補充（続き）

(16) The town hall installed ramps and wider doorways to remove barriers that had (　　) wheelchair users.

1 harvested　**2** hindered　**3** honored　**4** hired

(17) Although both plans had merits, the committee chose the second one because its maintenance costs were more (　　).

1 passionate　**2** predictable　**3** primitive　**4** partial

Why Supermarkets Adjust Their Music

Shoppers rarely pay conscious attention to the music playing overhead while they push a cart down an aisle. Yet retail researchers have long studied how tempo and volume subtly shape behavior inside stores. Fast, energetic songs tend to make people walk more briskly, whereas slower instrumental tracks encourage customers to pause and examine shelves.

A regional grocery chain recently reconsidered its daytime playlist after receiving feedback from older residents and parents of young children. Many found the combination of bright lights, announcements, and upbeat pop songs exhausting. In response, the chain introduced "quiet mornings" twice a week, turning off promotional broadcasts and lowering music volume. (18), complaints dropped and weekday morning visits grew steadily.

Interestingly, staff members benefited just as much as shoppers. Cashiers and shelf stockers spend up to eight hours in the store, hearing the same loop of songs repeatedly. When the store switched to calmer, varied acoustic pieces during regular hours, employees reported feeling less fatigued at the end of a shift. This mattered because (19).

The chain did not eliminate lively music altogether; weekend afternoon sales events still feature brighter playlists. However, managers stopped treating background sound as mere filler. They learned that (20) can make an ordinary errand noticeably less stressful for everyone inside the building.

(18)

1 On the contrary
2 Despite this effort
3 Otherwise
4 Soon afterward

(19)

1 employees were required to compose new songs every week
2 customers preferred waiting in longer checkout lines
3 calm, attentive staff create a more welcoming atmosphere for customers
4 acoustic instruments cost more than refrigerators

(20)

1 designing the sound environment with different listeners in mind
2 playing promotional announcements twice as loud
3 closing all grocery stores on weekday mornings
4 banning older residents from bringing shopping carts

Saving Seeds in School Gardens

Many elementary and junior high schools plant cherry tomatoes or sunflowers each spring using packets of commercial seeds. Students water the beds, harvest the crop in summer, and clear the plot in autumn. The next April, teachers buy fresh seed packets and repeat the cycle. While children learn how plants grow, they seldom see how one generation of plants produces the next.

A group of science teachers in Nagano decided to extend this lesson by teaching students to collect and store seeds from their own harvest. The task turned out to require more care than simply drying a few pods on a windowsill. If seeds were sealed in jars while still slightly damp, mold ruined them over winter. Students had to measure weight changes over several days to confirm that the seeds were dry enough. (21), the project connected biology with careful data recording.

The teachers also noticed an unexpected change in how students treated the garden in late summer. Plants that had finished fruiting were once pulled up right away because they looked untidy. Once students understood that seed pods needed weeks on the stem to ripen fully, they put up small explanatory signs rather than clearing the beds prematurely. Visitors learned that the brown stalks were (22).

Not every saved seed sprouted the following spring, and cross-pollination occasionally produced surprising shapes in pumpkins. Far from being failures, these variations sparked lively classroom questions about genetics. Passing labeled envelopes of seeds to the incoming grade gave students (23).

(21)

1 Nevertheless

2 By contrast

3 At the latest

4 In this way

(22)

1 part of an intentional stage in the plants' life cycle

2 evidence that students had forgotten their duties

3 weeds that needed chemical spray immediately

4 decorations bought from a flower shop

(23)

1 an excuse to skip all outdoor lessons

2 a sense of responsibility toward future learners

3 a guarantee that every pumpkin would look identical

4 a reason to stop recording weights

3 長文の内容一致選択
1〜4から最も適切な答えを一つ選び、解答用紙にマークしてください。

Relocating the Career Talk Sessions

From: Career Guidance Office
To: Second-Year High School Students
Subject: Room changes and question cards for Friday's Career Day

Dear students,
This Friday afternoon, twelve graduates working in fields ranging from nursing to civil engineering will visit our school for Career Day. Because more students signed up for the architecture and healthcare sessions than Room 201 and Room 202 can safely seat, those two sessions have been moved to the audiovisual hall and the library reading room. All other sessions remain in their original classrooms; please check the updated map posted outside the staff room.

Each guest will speak for twenty minutes and then spend fifteen minutes answering student questions. Rather than calling on hands randomly, student moderators will group similar questions together so more topics can be covered. For this reason, please submit at least one question through the class link by Wednesday at 5:00 p.m.

You will attend two sessions during the afternoon. Leave your backpacks in your homeroom and bring only a pen, your notepad, and your indoor shoes. Taking photographs or recording audio during the talks is not permitted, as several speakers will share workplace examples that are not for public distribution.

Career Guidance Office

Relocating the Career Talk Sessions — Questions

(24) Why were two of the sessions moved to different rooms?

1 The guest speakers requested computers and projectors.

2 The second floor will be closed for electrical repairs.

3 Sign-ups exceeded the safe seating capacity of the original classrooms.

4 All twelve graduates decided to speak together on one stage.

(25) Why are students asked to submit questions by Wednesday afternoon?

1 So moderators can organize similar questions and cover more topics.

2 So guest speakers can grade students' English grammar.

3 Because there will be no time for speakers to talk on Friday.

4 To decide which students are allowed to enter the library.

(26) Why is recording audio or taking photos prohibited during the sessions?

1 Camera flashes might damage old library books.

2 The school plans to sell an official video next month.

3 Some speakers will discuss workplace examples not meant for public sharing.

4 Mobile phones interfere with the audiovisual hall's microphones.

Repair Cafes and How Products Are Designed

Across many cities, weekend "repair cafes" invite residents to bring broken toasters, lamps, and bicycles to community halls where skilled volunteers help fix them for free. Most visitors come with a practical goal: extending the life of a household item and keeping it out of the trash. Over the past decade, however, these grassroots gatherings have begun producing something else of value—detailed records of why everyday appliances fail.

Volunteers at dozens of repair groups log each item's brand, approximate age, and the specific fault they encountered. When thousands of entries are combined, clear patterns emerge. For example, a handheld vacuum might have a motor capable of running for ten years, yet be discarded after two because a tiny plastic latch on the dust cup snaps and no spare part is sold. Similarly, some kettles cannot be opened without breaking glued seams, making even a simple switch repair nearly impossible.

Consumer advocacy groups and engineering schools have started using this shared data in constructive ways. Design instructors assign students to examine broken appliances from repair logs and redesign weak joints or sealed casings so they can be unscrewed with standard household tools. Meanwhile, policy discussions in several countries now reference repair-cafe statistics when proposing rules that require manufacturers to supply basic replacement parts for a set number of years.

Manufacturers sometimes argue that sealed, lightweight designs keep production costs low and protect users from tampering with dangerous electrical components. Safety is a legitimate concern, especially with high-voltage devices. For that reason, repair advocates distinguish between parts that ordinary owners can safely swap—such as filters, batteries, and latches—and internal components that should only be serviced by certified technicians.

Ultimately, the data gathered at neighborhood tables shows that durability is shaped long before an item breaks. While volunteers can rescue individual machines one Saturday at a time, lasting waste reduction depends on feeding those hands-on lessons back into how products are engineered in the first place.

Repair Cafes and How Products Are Designed — Questions

(27) Besides fixing individual items, what valuable outcome have repair cafes produced?

1 A profitable business selling luxury kitchen appliances.

2 A ban on all plastic materials in community halls.

3 Free electricity for households that donate old lamps.

4 Large-scale records showing how and why everyday products break.

(28) Why does the author mention the handheld vacuum in the second paragraph?

1 To praise a brand whose dust cups never break.

2 To show how one fragile, unreplaceable part can end the life of a working machine.

3 To prove that motors always fail within two years.

4 To explain why volunteers refuse to touch cleaning devices.

(29) How do engineering schools use the data collected by repair groups?

1 To calculate how much glue is needed to seal kettles permanently.

2 To rank community halls by the size of their tables.

3 To train students to design products that are easier to open and mend.

4 To replace all certified technicians with first-year students.

(30) How do repair advocates address safety concerns raised by manufacturers?

1 By claiming that high-voltage devices never cause accidents.

2 By separating user-replaceable parts from components requiring specialists.

3 By encouraging everyone to rewire dangerous electrical parts at home.

4 By demanding that all electrical appliances be replaced with hand tools.

(31) What is the main point of the final paragraph?

1 Volunteer repairs alone can eliminate all industrial waste.

2 People should stop bringing broken bicycles to community halls.

3 Products were always easier to fix before repair cafes existed.

4 Long-term waste reduction requires applying repair insights to initial product design.
