英検準1級 ライティング実戦ワーク
課題1：論証の構造を保つ要約

練習目安：65〜85語。公式試験の語数指定ではありません。

【課題】 次の英文の論点・利点・問題・提案を英語で要約してください。本文が留保している点を断定に変えないでください。

【元の英文】

Public research funders increasingly ask scientists to state in advance how their work might benefit society. Supporters argue that such statements encourage researchers to consider potential users and make public spending easier to justify. The requirement may also help identify opportunities for collaboration beyond universities. Critics, however, point out that valuable discoveries can arise from questions whose practical significance is initially unclear. If funding decisions depend too heavily on confident predictions, applicants may exaggerate likely benefits or avoid uncertain but important investigations. One funding body has therefore introduced different expectations for different kinds of projects. Applied projects must describe plausible users and routes to implementation, while exploratory projects are assessed more strongly on the significance of their questions and the quality of their methods. Both types must explain how results will be shared. The funder stresses that this arrangement does not remove uncertainty or guarantee future impact. It is intended to make accountability sensitive to the character of the research rather than treating every project as if its eventual use could be specified in advance.

■ 下書きスペース（語数を数えながら書いてみよう）

■ 書いた後の自己点検チェック

☐ 支持・批判の両方を歪めず示した
☐ 制度変更の理由と内容を結びつけた
☐ mayとguaranteeの違いを保った
☐ 原文にない評価を加えず自分の文で統合した

英検準1級 ライティング 課題1 参考解答と解説

課題：論証の構造を保つ要約

■ 参考解答（一例）

Requiring researchers to predict social benefits can encourage collaboration and accountability, but may disadvantage exploratory work or encourage exaggerated claims. One funder therefore distinguishes applied from exploratory projects, assessing the former's likely users and implementation plans and the latter's questions and methods. Both must share results. This approach does not guarantee impact; it aims to match accountability to different kinds of research rather than demand equally precise forecasts from all projects.

■ 構成と表現のポイント

説明責任という利点と、探索的研究が不利になる問題を両方残します。新制度の保証範囲を広げず、研究の種類に合わせる狙いで結びます。

■ もう一度書き直すときのヒント

・参考解答をそのまま丸暗記するのではなく、「主張の型（I think … / First, … / Second, …）」や「質問・要約のつなぎ語」を自分の言葉に置き換えて練習しましょう。

・アプリの「英検ライティング」画面では、語数カウントと端末保存・自己点検を使って何度でも推敲できます。

課題2：評価制度について論じる

練習目安：140〜170語。

【課題】 Should public organisations rely mainly on numerical targets when evaluating their services? Develop an argument with two distinct reasons and address a possible objection.

■ 下書きスペース（語数を数えながら書いてみよう）

■ 書いた後の自己点検チェック

☐ 問いに正面から答える立場を置いた
☐ 二つの理由を区別して十分に展開した
☐ 反論に応答し主張を補強した
☐ 過剰な一般化を避け論理と語彙を点検した

英検準1級 ライティング 課題2 参考解答と解説

課題：評価制度について論じる

■ 参考解答（一例）

Public organisations should use numerical targets, but should not rely on them as their main evidence of service quality. First, easily measured outputs do not always capture the outcomes residents need. A rapid acknowledgement, for example, can satisfy a response target without providing useful assistance. Giving that number excessive weight may encourage staff to prioritise recorded speed over resolving complex problems. Second, a single measure can conceal differences between groups. A high average completion rate may coexist with serious barriers for residents whose circumstances do not fit a standard process. Critics may argue that broader assessments are costly and vulnerable to selective storytelling. This concern is valid, but it supports careful evaluation design rather than exclusive reliance on numbers. Organisations can combine consistent questions, sampled user feedback and transparent reporting of limitations. Such an approach preserves comparability while making it harder for a convenient indicator to stand in for the purpose of the service.

■ 構成と表現のポイント

目的の代理指標になる危険と、集計値が格差を隠す危険を区別しています。反論を認め、標準質問・標本調査・限界の開示という実行可能な応答につなげています。

■ もう一度書き直すときのヒント
